

# LISP Data and Control Plane Discussion (RFC6830bis and RFC 6833bis)

Albert Cabellos, Dino Farinacci,  
Damien Saucez

IETF 96 Berlin – LISP WG

July 2016

# Scope & Context

The LISP WG is chartered to continue work on the LISP base protocol and produce standard-track documents. In order to produce a coherent set of documents, **the first (and high priority) work item of the LISP Working Group is to develop a standard-track solution based on the completed Experimental RFCs** and the experience gained from early deployments. This work will include reviewing the existing set of Experimental RFCs and doing the necessary enhancements to support a base set of standards track RFCs. The group will review the current set of Working Group documents to identify potential standards-track documents and do the necessary enhancements to support standards-track.

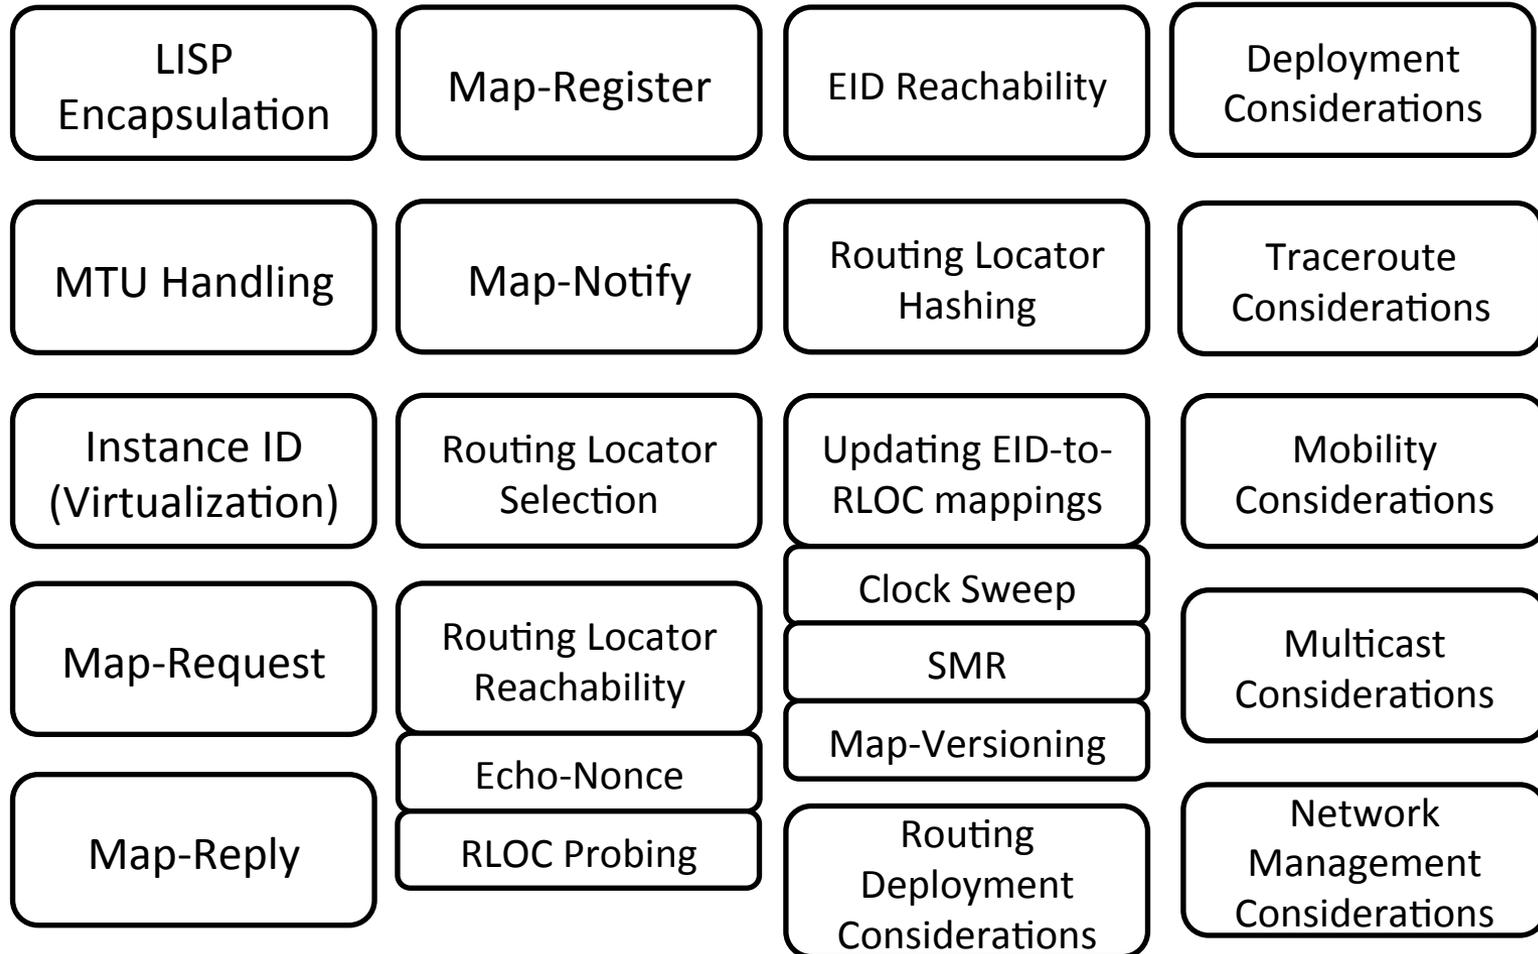

# Scope & Context

- Apr 2017 Submit a LISP unicast data-plane specification (6830bis) document to the IESG for consideration as Proposed Standard
- Jul 2017 Submit a LISP control-plane specification (6833bis) document to the IESG for consideration as Proposed Standard

# In this presentation:

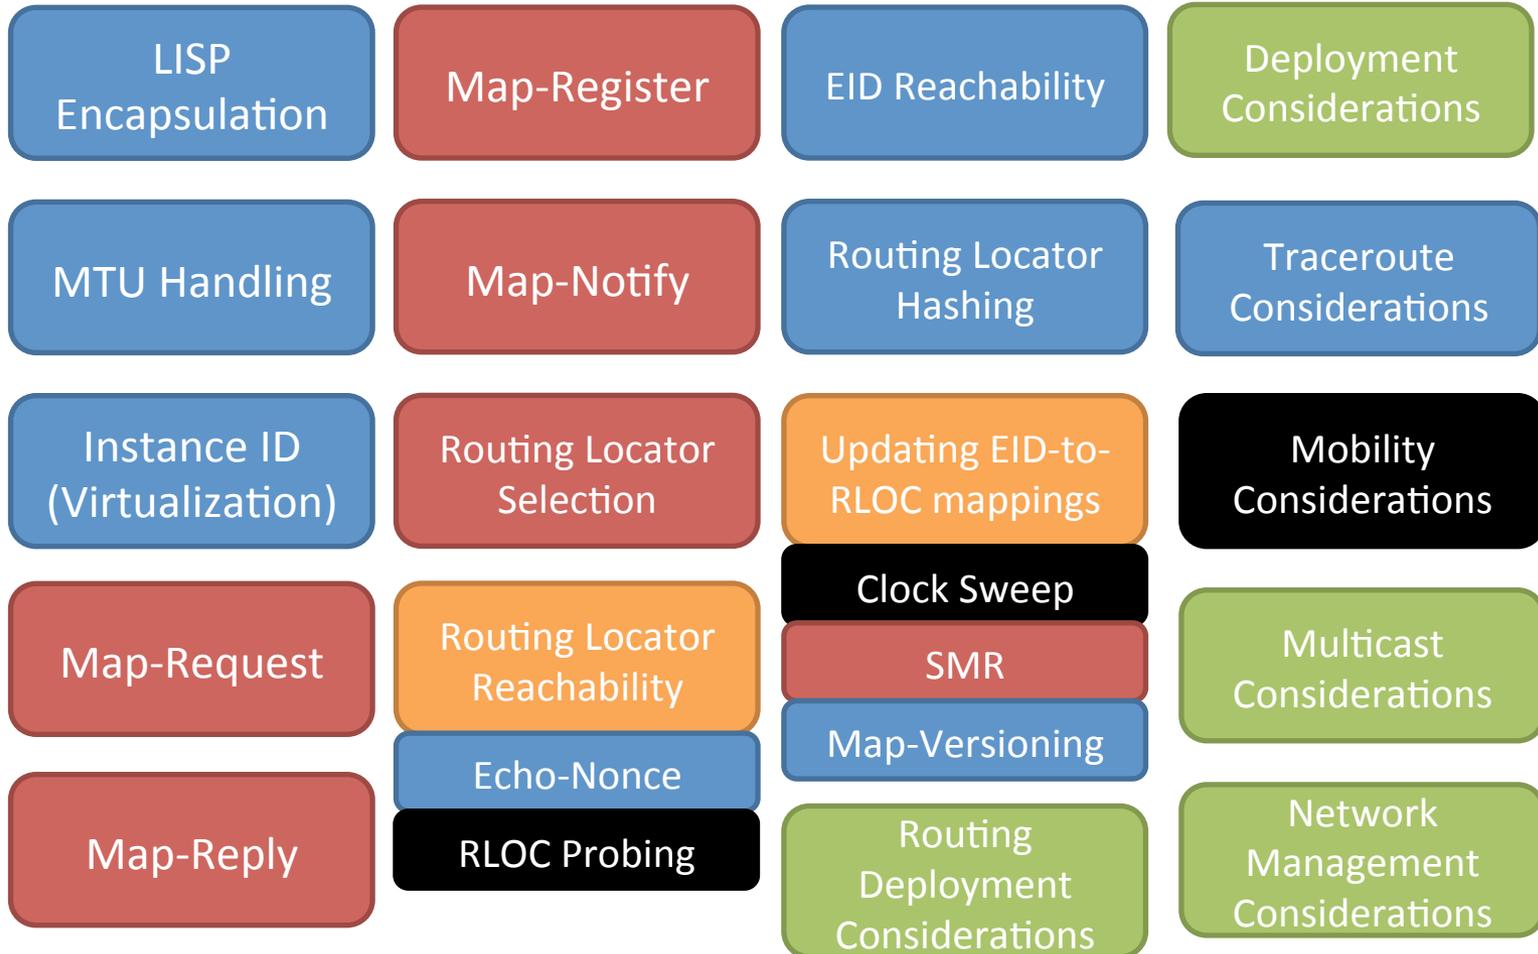

- Review the contents of RFC6830 (LISP) and RFC6833 (LISP Map-Server Interface)
- Trigger discussion on the Table of Contents of the LISP (RFC6830bis) and LISP Control-Plane (RFC6833bis) specs
- Rationale: Mostly an editorial work, include fixes and lessons learnt from experimentation

# RFC6830 - LISP

- RFC 6830bis (LISP Data-Plane)
- RFC 6833bis (LISP Control-Plane)
- Other

- Split 6830bis and 6833bis
- Requires further discussion

# LISP (Data-Plane) (RFC6830bis) Table of Contents

# RFC6830bis – LISP Table of Contents (1)

**"Locator/ID Separation Protocol".**

## **1. Introduction**

Remove description of the scalability of the BGP DFZ, describe the LISP protocol as an overlay solution.

Indicate early in the document that many different data-planes can use the control-plane interface.

Add reference to RFC7215 (deployment considerations)

Considerations for network management tools exist so the LISP protocol suite can be operationally managed. These mechanisms can be found in [LISP-MIB] and [RFC6835].

## **2. Requirements Notation**

## **3. Definition of Terms**

Add RTRs

# RFC6830bis – LISP Table of Contents (2)

## 4. Basic Overview

Mention RTRs and point to the right spec.

### 4.1. Packet Flow Sequence

Mention that the ITR checks its Map-Cache to obtain the RLOCs. If not RLOC, then triggers a mapping retrieval. A way to do so is 33bis.

# RFC6830bis – LISP Table of Contents (3)

## 5. LISP Encapsulation Details

Add how a source-port of 4341 may need to be used for NAT-traversal when doing encapsulation. Make reference that work in progress for NAT-traversal. But do not reference NAT-traversal Internet Draft.

5.1. LISP IPv4-in-IPv4 Header Format

5.2. LISP IPv6-in-IPv6 Header Format

5.3. Tunnel Header Field Descriptions

# RFC6830bis – LISP Table of Contents (4)

## **6. LISP Map-Cache**

Specify the Map-Cache, describe (not specify) how RFC6830bis interacts with RFC6833bis.

## **7. Dealing with Large Encapsulated Packets**

Fix Joel comment in MTU Handling section.

7.1. A Stateless Solution to MTU Handling

7.2. A Stateful Solution to MTU Handling

# RFC6830bis – LISP Table of Contents (5)

## 8. Using Virtualization and Segmentation with LISP

Indicate how the instance-ID is 32 bits in control-plane and 24-bits in the data-plane akin to what was put in the LISP-DDT spec.

## 9. Routing Locator Selection

## 10. Routing Locator Reachability

Fix the text regarding the 'R' bit. Having a route to a locator does not mean that the locator is up. The current text states otherwise.

Specify the Echo Nonce Algorithm

**RLOC-Probing (requires further discussion)**

# RFC6830bis – LISP Table of Contents (6)

## 11.- Routing Locator Hashing

14.3. Fast Endpoint Mobility

## 12. Changing the Contents of EID-to-RLOC Mappings

14.4. Fast Network Mobility

Database Map-Versioning

14.5. LISP Mobile Node

## 13. Traceroute Considerations

Mobility

Keep it temporarily, WG has to be aware that the text will move to a different place.

## 14. Mobility Considerations

14.1. Site Mobility

14.2. Slow Endpoint Mobility

# RFC6830bis – LISP Table of Contents (7)

## 11.- Routing Locator Hashing

13.1. Site Mobility

## 12. Traceroute Considerations

13.2. Slow Endpoint Mobility

12.1. IPv6 Traceroute

13.3. Fast Endpoint Mobility

12.2. IPv4 Traceroute

13.4. Fast Network Mobility

12.3. Traceroute Using Mixed  
Locators

13.5. LISP Mobile Node  
Mobility

## 13. Mobility Considerations

**Requires further discussion**

# RFC6830bis – LISP Table of Contents (8)

## **14. Security Considerations**

Add reference to lisp-threats

Add reference to lisp-crypto

Add reference to LISP-SEC

## **15. IANA Considerations**

15.2. LISP Address Type Codes

15.3. LISP UDP Port Numbers

## **16. References**

16.1. Normative References

16.2. Informative References

# LISP Control-Plane (RFC6833bis) Table of Contents

# RFC6833bis – LISP Table of Contents (1)

Change name “LISP Map-Server Interface” to “LISP Control-Plane” and make abstract reflect this.

## **1. Introduction**

Indicate early in the document that many different data-planes can use the control-plane interface.

## **2. Definition of Terms**

## **3. Basic Overview**

Indicate there may be nodes in the mapping system that are not MRs or MSs, that is a ALT-node or a DDT-node.

# RFC6833bis – LISP Table of Contents (2)

## 4. EID-to-RLOC Mapping

### 4.1. LISP IPv4 and IPv6 Control-Plane Packet Formats

#### 4.1.1. LISP Packet Type Allocations

#### 4.1.2. Map-Request Message Format

Document these new first longword bits in the Map-Request header:

```
+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
|Type=1 |A|M|P|S|p|s|m| Reserved  |L|D|   IRC   | Record Count  |
+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
```

# RFC6833bis – LISP Table of Contents (3)

- 4.1.3. EID-to-RLOC UDP Map-Request Message
- 4.1.4. Map-Reply Message Format
- 4.1.5. EID-to-RLOC UDP Map-Reply Message
- 4.1.6. Map-Register Message Format

Document these new first longword bits in the Map-Register header:

```
+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
|Type=3  |P|S|I|          Reserved          |F|T|a|m|M| Record Count  |
+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+
```

# RFC6833bis – LISP Table of Contents (4)

## 4.1.7. Map-Notify Message Format

Indicate Map-Notify-Ack messages exist for Map-Notify reliability.

## 4.1.8. Map-Referral Message Format

Add Map-Referral to control-plane codepoints since this is document will refer to DDT.

## 4.1.8. Encapsulated Control Message Format

Document these new first longword bits in the ECM header:

```
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+
|Type=8 |S|D|E|M|                               Reserved                               |
+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+---+
```

# RFC6833bis – LISP Table of Contents (5)

## 5. Changing the Contents of EID-to-RLOC Mappings

### 5.1. Clock Sweep

(Requires further discussion)

### 5.2. SMR

## 6. Interactions with Other LISP Components

### 6.1. ITR EID-to-RLOC Mapping Resolution

### 6.2. EID-Prefix Configuration and ETR Registration

### 6.3. Map-Server Processing

### 6.4. Map-Resolver Processing

Include LISP-DDT and concept of Map-Resolvers have a referral-cache.

#### 6.4.1. Anycast Map-Resolver Operation

## 6. Security Considerations

Reference lisp-threats

## 7. References

### 7.1. Normative References

### 7.2. Informative References
