

# EKT

Draft-ietf-perc-srtp-ekt-diet-01

Cullen Jennings

July 2016

# Changes from last meeting

When a key is distributed, it can also have a Time To Live

Old key used to transmit for 250 ms after receipt of new key to give all nodes time to learn new key before it is used

# Time to live

Currently using relative time

Would absolute time be better ?

Proposal: Keep as relative time

# Missing Stuff

Need an IANA registry for future messages types

What should registration policy be ?

Should we not conflict with code points used by the non diet EKT draft from several years ago ?
