

# Concise Software Identifiers

IETF 96, Berlin, July 22th

Henk Birkholz, et. al.

# CBOR + CDDL + COSE

- Examples of application
  - SAM, Vulnerability Assessment, Golden Measurements
- A CDDL
- A specific COSE header
- A lot of security considerations
- A (to be) appendix that elaborates on the purpose of each attribute (e.g. the corpus attribute, the tagid, and so on)
- SACM & COSWID
  - Payload for SWID M&A
  - (also, with COSWID signing can be done in a sensible way now)
