YANG Data Model for Layer 3 TE Topologies
draft-liu-teas-yang-l3-te-topo-05

Abstract

This document defines a YANG data model for layer 3 traffic engineering topologies.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on May 3, 2018.

1. Introduction

This document defines a YANG [RFC7950] data model for describing the relationship between a layer 3 network topology [I-D.ietf-i2rs-yang-l3-topology] and a TE topology [I-D.ietf-teas-yang-te-top].

When traffic engineering is enabled on a layer 3 network topology, there will be a corresponding TE topology. The TE topology may or may not be congruent to the layer 3 network topology. When such a congruent TE topology exists, there will be a one-to-one association between the one modeling element in the layer 3 topology to another element in the TE topology. When such a congruent TE topology does not exist, the association will not be one-to-one. This YANG data model allows both cases.

1.1. Terminology

The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14, [RFC2119].

The following terms are defined in [RFC7950] and are not redefined here:

- o augment
- o data model
- o data node

2. Modeling Considerations

2.1. Relationship Between Layer 3 Topology and TE topology

In general, layer 3 network topology model and TE topology model can be used independently. When traffic engineering is enabled on a layer 3 network topology, there will be associations between objects in layer 3 network topologies and objects in TE topologies. The properties of these relations are:

- o The associations are between objects of the same class, i.e. node to node or link to link.
- o The multiplicity of such an association is: 0..1 to 0..1. An object in a layer 3 network may have zero or one associated object in the corresponding TE network.

2.2. Relationship Modeling

YANG data type leafref is used to model the association relationship between a layer 3 network topology and a TE topology. YANG must statements are used to enforce the referenced objects are in the topologies of proper type.

3. Model Structure

3.1. Layer 3 TE Topology Module

The model tree structure of the layer 3 TE topology module is as shown below:

```

module: ietf-l3-te-topology
  augment /nd:networks/nd:network/nd:network-types
  /l3t:l3-unicast-topology:
    +--rw l3-te!
    augment /nd:networks/nd:network/l3t:l3-topology-attributes:
      +--rw l3-te-topology-attributes
        +--rw network-ref? -> /nw:networks/network/network-id
    augment /nd:networks/nd:network/nd:node/l3t:l3-node-attributes:
      +--rw l3-te-node-attributes
        +--rw node-ref? -> /nw:networks
/network[nw:network-id=current()/../network-ref]/node/node-id
      +--rw network-ref? -> /nw:networks/network/network-id
    augment /nd:networks/nd:network/nd:node/lnk:termination-point
  /l3t:l3-termination-point-attributes:
    +--rw l3-te-tp-attributes
      +--rw tp-ref? -> /nw:networks
/network[nw:network-id=current()/../network-ref]
/node[nw:node-id=current()/../node-ref]/nt:termination-point/tp-id
      +--rw node-ref? -> /nw:networks
/network[nw:network-id=current()/../network-ref]/node/node-id
      +--rw network-ref? -> /nw:networks/network/network-id
    augment /nd:networks/nd:network/lnk:link/l3t:l3-link-attributes:
      +--rw l3-te-link-attributes
        +--rw link-ref? -> /nw:networks
/network[nw:network-id=current()/../network-ref]/nt:link/link-id
      +--rw network-ref? -> /nw:networks/network/network-id

```

3.2. Packet Switching TE Topology Module

This is an augmentation to base TE topology model.

```

module: ietf-te-topology-packet

5. IANA Considerations

RFC Ed.: In this section, replace all occurrences of 'XXXX' with the actual RFC number (and remove this note).

This document registers the following namespace URIs in the IETF XML registry [RFC3688]:

```
-----
URI: urn:ietf:params:xml:ns:yang:ietf-l3-te-topology
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
-----
```

```
-----
URI: urn:ietf:params:xml:ns:yang:ietf-l3-te-topology-state
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
-----
```

```
-----
URI: urn:ietf:params:xml:ns:yang:ietf-te-topology-packet
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
-----
```

```
-----
URI: urn:ietf:params:xml:ns:yang:ietf-te-topology-packet-state
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.
-----
```

This document registers the following YANG modules in the YANG Module Names registry [RFC6020]:

```
-----
name:      ietf-l3-te-topology
namespace: urn:ietf:params:xml:ns:yang:ietf-l3-te-topology
prefix:    l3te
reference:  RFC XXXX
-----
```

```
-----
name:      ietf-l3-te-topology-state
namespace: urn:ietf:params:xml:ns:yang:ietf-l3-te-topology-state
prefix:    l3te-s
reference:  RFC XXXX
-----
```

```
-----
name:      ietf-te-topology-packet
namespace: urn:ietf:params:xml:ns:yang:ietf-te-topology-packet
prefix:    tet-pkt
reference:  RFC XXXX
-----
```

```
-----
name:      ietf-te-topology-packet-state
namespace: urn:ietf:params:xml:ns:yang:ietf-te-topology-packet-state
prefix:    tet-pkt-s
reference:  RFC XXXX
-----
```

6. Security Considerations

The configuration, state, action and notification data defined in this document are designed to be accessed via the NETCONF protocol [RFC6241]. The data-model by itself does not create any security implications. The security considerations for the NETCONF protocol are applicable. The NETCONF protocol used for sending the data supports authentication and encryption.

Appendix A. Companion YANG Model for Non-NMDA Compliant Implementations

The YANG modules `ietf-l3-te-topology` and `ietf-te-topology-packet` defined in this document are designed to be used in conjunction with implementations that support the Network Management Datastore Architecture (NMDA) defined in [I-D.ietf-netmod-revised-datastores]. In order to allow implementations to use the model even in cases when NMDA is not supported, the following companion modules, `ietf-l3-te-topology-state` and `ietf-te-topology-packet-state`, are defined as state models, which mirror the modules `ietf-l3-te-topology` and `ietf-te-topology-packet` defined earlier in this document. However, all data nodes in the companion module are non-configurable, to represent the applied configuration or the derived operational states.

The companion modules, `ietf-l3-te-topology-state` and `ietf-te-topology-packet-state`, are redundant and SHOULD NOT be supported by implementations that support NMDA.

As the structure of the companion modules mirrors that of the cooresponding NMDA models, the YANG trees of the companion modules are not depicted separately.
