Information Model Open Issues
draft-ietf-lmap-information-model-12

Jürgen Schönwälder
Jacobs University Bremen

#1: Configuration of device-id

- Issue:
  - During the YANG module review, the question was raised whether it is the job of the LMAP information model to configure a device-id
  - It seems to be outside of the LMAP responsibility to configure a device-id (since it is a device property and not an LMAP specific property)

- Proposal:
  - Remove ma-preconfig-device-id from ma-preconfig-obj and ma-config-device-id from ma-config-obj

#2: Reporting of agent-id and group-id

- Issue:
  - The behavior that the agent-id is reported even though report-agent-id is false is surprising
  - We should define mechanisms but not policies
- Proposal:
  - The report-agent-id unconditionally controls the reporting of the agent-id
  - A new report-group-id unconditionally controls the reporting of the group-id
  - It is a policy decision which of these ids are reported

Next steps

- Editor action:
  - Minor edits needed to implement the resolution of the two issues
  - Post draft-ietf-lmap-information-model-13
- Chairs action:
  - Second WG last call on -13 may be needed
- WG member actions:
  - Document review (hopefully final review)
