NETCONF and RESTCONF Client/Server Models

Drafts covered:

- draft-ietf-netconf-keystore-00
- draft-ietf-netconf-ssh-client-server-01
- draft-ietf-netconf-tls-client-server-01
- draft-ietf-netconf-netconf-client-server-01
- draft-ietf-netconf-restconf-client-server-01

NETCONF WG
IETF 97 (Seoul)

Recap

- In the IETF 96 (Berlin), we reviewed the final server-model draft split decision, and went over some open issues…

Updates since IETF 96

- Very little progress, due to focus on many other drafts…

- Only three issues resolved:
  – system-keychain" renamed to "keystore"   (Issue #3)
  – selected PKCS#7 to store certificate chains (Issue #1)
  – selected strategy for storing passwords (Issue #5)

- Note: all the drafts were updated, but primarily only to address the keystore renaming issue.

Next Steps

- Now that the Zero Touch (and Voucher) drafts are winding down, this package of drafts will get focus again.

- Also will focus on the NETCONF Call Home reference implementation, which is being used to validate an aspect of these models.
