

draft-ietf-dnsop-terminology-bis:
please talk to us

Paul Hoffman
IETF 98, Chicago

Do you agree with the new material?

- In Section 2, we added:
 - **Naming system** as a list of facets that we made up
 - **Domain name** as a very short definition that is independent of the DNS RFCs
 - **Global DNS** defined by filling in descriptions for the naming system facets
- Is this over-reaching? Should we do this in an IETF consensus document? Does this help DNS documents? Does it help folks outside the DNS world? Does it impact existing documents that use “domain name”?
- Mic time!

Additions made in -05

- Added “Context for resolving a name” to the list of facets for “Naming system”
- Added “Locally served DNS zone”
- Added “QNAME” to clarify the differences from RFC 2308
- Added “Recursive resolver”
