draft-ietf-isis-yang-isis-cfg
draft-ietf-isis-sr-yang

IETF 98 Chicago

draft-ietf-isis-yang-isis-cfg

- Last changes:
  - Alignment with OSPF on containers/leaves

  - Fixed compliance with key-chain model changes

  - Now uses rt-types from DT

draft-ietf-isis-yang-isis-cfg

- What's missing ?
  - Routing policies
    - What's the status of draft-ietf-rtgwg-policy-model ?
    - It is expired while it's a critical piece of work for routing protocols

  - Operational states
    - We have a dual tree for now
    - Do we change ?

draft-ietf-isis-sr-yang

- Almost stable document

- We just have to update it with the new P-bit

Next steps

- draft-ietf-isis-yang-isis-cfg:
  - Do we last call base IS-IS model without routing policy and with current ops state ?
  - Do we wait ? (for couple of months again)

- draft-ietf-isis-sr-yang:
  - Need a small fix in it
  - After do we last call at the same time as base SR and OSPF SR to ensure consistency and facilitate updates of all docs upon receiving feedback ?
