A Simple BGP-based Mobile Routing System for the Aeronautical Telecommunications Network

Fred L. Templin (fltemplin@acm.org)
IETF98 Routing Working Group
March 30, 2017
Background

• International Civil Aviation Organization (ICAO) building an IP-based networking system for worldwide Air Traffic Management (ATM)

• Developing the Aeronautical Telecommunications Network with Internet Protocol Services (ATN/IPS)

• Under development in ICAO Working Group I (WG-I)

• IPv6-based; mobility capable

• Accommodates aircraft with multiple data links
  • SATCOM
  • LDACS
  • VHF
  • etc.
Mobility Subgroup Solution Discussion

- Looking at three candidate mobility solutions:
  - PMIP
  - Ground-based LISP
  - BGP-based overlay (subject of this document)

- A Simple BGP-Based Mobile Routing System for the Aeronautical Telecommunications Network

- BGP overlay network – does not interact with the global public Internet BGP routing system

- Based on a “hub and spokes” arrangement with stub ASBRs in data link provider subnetworks and core ASBRs in center of network

- s-ASBRs advertise and withdraw airplane Mobile Network Prefixes (MNPs)

- c-ASBRs in a hub AS forward packets between s-ASBRs

- Route optimization removes c-ASBRs from path
ATN/IPS With BGP

BGP Routing Service (Hub AS)

Stub AS

Subnetwork (MNP routing)

iBGP

eBGP

Subnetwork (MNP routing)

Subnetwork (MNP routing)

Subnetwork (MNP routing)

Subnetwork (MNP routing)
BGP Details

- S-ASBRs advertise their associated MNPs to c-ASBRs
- C-ASBRs originate “default”, but DO NOT advertise any MNPs to S-ASBRs
- Each stub subnetwork is assigned a MED metric
- C-ASBRs disable AS_PATH selection and select routes based on MED
- Means that packets may take a longer path in order to reach a stub network with a lower MED value
- Reason: some data links are preferred over others (airplane should use SATCOM as first alternative and fail over to other links if necessary)
- SYSTEM ENSURES THAT THERE WILL ALWAYS BE A WORKING ROUTE
- Have working network model – demonstrations on request
Draft Status

- Will be presented at ICAO WG-I mobility subgroup in Montreal week of May 15
