Example Packets for 6TiSCH Configuration
draft-munoz-6tisch-examples-02

Abstract

This draft contains example packets exchanged by nodes implementing the following ietf documents: RFC 8180: Minimal IPv6 over the TSCH Mode of IEEE 802.15.4e (6TiSCH) Configuration, draft-wang-6tisch-6top-protocol-07, RFC 8138: IPv6 over Low_power Wireless Personal Area Network (6LoWPAN) Routing Header and RFC 8025: IPv6 over Low-Power Wireless Personal Area Network (6LoWPAN) Paging Dispatch. All packets are presented both in raw binary and fully parsed contents. This document can be used as a reference when implementing the previous mentioned RFCs and Internet Drafts.

1. Tools Used

All results presented in this document are collected by running the OpenWSN firmware [OpenWSN] in simulation mode and capturing the packets exchanged using the development branch of Wireshark. At the time of writing this document, the dissection of the RFC 8138 and RFC 8025 implementation has not been merged into the master branch of Wireshark but it will be by the time of the 1st F-Interop 6TiSCH Interoperability Event.

These are the version of the source code used:

1. Wireshark dissector: https://github.com/wireshark/wireshark/commit/1aa8ded9a3de8e6fb5b6a7b7dcca9d93bb50dcdd
