

DMM Deployment Models

IETF 99 - Prague, Czech Republic

Sri Gundavelli
Seil Jeon

Document Status

- The focus of the document (draft-ietf-dmm-deployment-models) is on DMM terminology, functional elements, security model and call flows.
- The current version has addressed all the open issues and is in a reasonably good shape. However, there has not been much feedback from the WG lately.
- Given the inter-dependency with the other DMM working group documents, we need to ensure there is consistency between the specifications and in that sense, additional reviews will surely help.
- Authors suggest moving this to AD review by IETF 100.
