draft-ipsecme-split-dns-01

- Fix CFG_REQUEST / CFG_REPLY requirements

  - Follow core IKEv2 spec for attributes
  - when you can send an attribute (always)
  - how to interpret receiving these (do as you please)

- Unconfigure DNS when IKE SA goes down (not IPsec SA)

  - Not when IPsec SA covering IP's of DNS servers goes down

- [DISCUSS] Changed DNS domain to wire format

  - Presentation format easier to use in configuration files
  - wire format requires wire2pre() and pre2wire()
  - Tero'); DROP TABLE wants wire because it is more secure?
