Nancy Cam-Winget ([ncamwing@cisco.com](mailto:ncamwing@cisco.com)),

IETF 97, July 20<sup>th</sup>, Prague

# Housekeeping

- Continuing alignment with I2NSF Terminology
  - Capability, Role, Policy, etc.
- Better alignment with RFC4949
  - Subject is an issue!
  - Target Endpoint (Profile) was improved
  - The current remediation is clumsy, please chime in
- Endpoint Characteristics vs. Endpoint attributes
  - TOE definition in RFC4949 vs Initial SACM lingo
- Virtual Component was introduced on request

# Current Activities

- A lot of new issues
- All quite relevant – again, please chime in 😊
- Example to be discussed in this session
  - Evaluation vs. Assessment
- Other issues to be discussed here right now?
- Attestation and corresponding terms were just spliced of into a separate document
  - I.D-birkholz-attestation-terminology

# Next Steps

- Splicing of Event Terminology
- Addressing new wave of issues (good!)
- Improving and generalizing terms due to lessons learned via the Hackathon
  - And incoming solution drafts
- Continuing to eliminate last nits in regard to RFC4949 to make it 100% commentary and an addition to the existing terms in regard to Security Automation for all domains
