Chair Interrupt

Rules of the road

Presenters are keeping it short and to the point.

We have time for discussion so let's keep comments until then.

We want to ensure that we address both "political" and "technical" bits; this might not be a clean split.

Questions the chairs want answered (policy)

The main question: Is this subject something that the WG should consider?

    this" = "passive decryption of data center traffic".

Subquestion: Is this wiretapping?

Questions the chairs want answered (technical)

What technical solutions are available, because the WG gets change control if adopted.

Notes:

We don't really need to answer this completely now.

Aspects of the solution may fall outside of the current charter.
