

CLUE Framework

Interim Meeting

May 21, 2013

Mark Duckworth

Framework Agenda

- Recent changes
- Continue discussion about Switched Captures
- Other open issues
- Open Tickets

Recent Changes

- Refactoring – moved concepts and explanations back into framework; keeping syntax-like notation out of framework
- Added Media Capture attributes based on draft-groves-clue-capture-attr-01
- Simultaneous Set can be expressed in terms of Capture Scene and Capture Scene Entry
- Removed Area of Scene attribute
- Several clarifications as discussed at IETF86 and on email list

Switched Capture Discussion

- Desire a more comprehensive explanation of how Providers and Consumers can use switched captures
- Focus on scenario with a switching MCU, with endpoint Consumers performing composition and layout
- Mark can write a new draft for discussion
 - follow on to draft-pepperell-clue-switched-attribute and draft-hansen-clue-consumer-layout and June 2012 interim meeting discussion
 - propose addition to use case document; more specific scenario based on section 3.3 Multipoint Meeting
- Relates to Tickets #19, #26 (site switching), #10 (does Consumer have sufficient information)

Other Open Issues

- Role Attributes – new draft coming from Christian?
- Update Example section – action for editors
- clean up Encoding parameters for pixels/sec (computational complexity), should be independent of codec (e.g. H.264, H.265, ...) – looking for input from the group
- Ensure Framework and Data Model are using consistent terminology – action for editors
- IANA Considerations – none for framework?
- Security Considerations – looking for input from the group

Open Tickets

- #20 – rejecting configure – action for Andy – do we really need this?
- #22 – out of date Advertisement – action for Keith
- #25 – is Advertisement “all” or “delta” – propose keep it as “all” and close this ticket
