

DataChannels

IETF RTCWEB Interim
May 2014
Washington DC

Randell Jesup

Status of drafts

- Current documents:
 - draft-ietf-rtcweb-data-protocol-05
 - Draft-ietf-rtcweb-data-channel-09
- Most changes were editing nits
- Can we start a last-call?

Recent changes

draft-ietf-rtcweb-data-protocol

- Security Considerations
 - Per feedback from Magnus. It's not exciting
- Priority: signed changed to unsigned
- Made it clear that choosing even or odd channels via DTLS only applies if you're using DTLS
- (-04) Switch to WebSocket Protocol Registry

Recent changes

draft-ietf-rtcweb-data-channel

- (S)RTP -> SRTP
- Older changes (-08, before London):
 - Added pointers to TSVWG drafts
 - Interface changes should be passed to the SCTP stack, restart congestion/etc
 - Removed congestion control negotiation discussion
 - Clarification you should Reset if partner does

Any other issues?

- I reviewed all emails going back to before London
- I see no other un-dealt-with issues
- Can we be done, go to last call, and move on?

Soundtrack to 1776

- Enjoy! (Ted, that's your queue)
