

# **I2RS Filter Based RIB Info/Data Model**

draft-kini-i2rs-fb-rib-info-data-model

# What is FB-RIB?

- It is used by the routing element to program FIB entries in hardware
- Allows match on multiple fields in incoming packet and meta-data
  - Match can be specified as a logical expression
- Can specify action to manipulate the packet and how it must be forwarded

# Relationship to other models (not comprehensive)

- Is contained in a routing-instance (defined for RIB)
  - Can be applied to any subset of interfaces in the routing-instance
- Can specify forwarding action to use the FIB programmed using the RIB
- Can use ACL model
