

# Credential types

Authentication of Client and RS

# Current draft

- Defines Communication Security Protocol options
  - TLS, DTLS and ObjectSecurity
- TLS and Object security no details specified
- DTLS options
  - Same as for CoAP, (PreSharedKey, RawPublicKey and Certificate)
- DTLS Client Authentication
  - PSK or RPK
- DTLS RS Authentication
  - PSK, RPK or Certificate

# Questions to the WG

- How many options do we need?
- Which credential types are most important?
- Do we need to document all alternatives in this document?
