Henk Birkholz

Jarret Lu

Nancy Cam-Winget

Purpose of the Terminology I-D

- Unified understanding of terms and their semantic (relationship) across SACM documents
- Relationship to identical terms used outside of SACM (and outside the IETF)
- Ongoing process
- Addresses redundant or inconsistent definitions

Does a repository provide data? #25

- "A repository is a specific controller type that contains functions to consume, store and provide information of a particular kind."

Software package, software component, software instance #18

- Added
- Minor modification to make the definitions vendor neutral

Data Plane & Control Plane

- Added references from existing RFC (context: routing)
- Homogenized structure of both definitions
- Resolving Issue #3 & FIXME depends on if and how to define management plane.

SACM Task

- Collection Task, Evaluation Task
- Asset Classification
- Attribute Definition
- Policy Definition
- Information Collection
- Endpoint Assessment
- Result Reporting

"Definition Tasks"

- "Attribute Definition": not about attribute definition?
- "Policy Definition": not conducted by a SACM component?

Guidance

- Are "Configuration", "Profiles", and "Policies" examples of guidance?
- How does "you need to know what you want to know about a target endpoint" fit in here?
- Architecture draft (3.1.3.1) states that "A collector consumes Guidance and/or other Posture Assessment Information"
- What about "how to collect", which would be similar to capability?
