

Concise Software Identifiers

SACM Virtual Interim, October 13th

Henk Birkholz, et. al.

Draft progress

- First instances of running code -> refining the CDDL specification!
- Documentation of attributes is still ongoing work (target: Seoul meeting)
- Better differentiation of attributes with identical name but different semantical meaning (obvious example: “name”)
- Next steps: Translation of free text descriptions of content for the “any attribute” into concrete CDDL definitions (first example: “file-hashes”)
