Evaluation of NADA in ns3-rmcat

draft-ietf-rmcat-nada-04

Xiaoqing Zhu, Rong Pan, Michael A. Ramalho, Sergio Mena, Paul E. Jones, Jiantao Fu, and Stefano D'Aronco April 2017 | IETF RMCAT Virtual Interim

- NADA implementation in ns3-rmcat

- Summary of known issues

Outline

Performance in rmcat-wired test cases with different traffic sources

Performance in rmcat-wifi test cases with CBR-like traffic source

NADA Implementation in *ns3-rmcat*

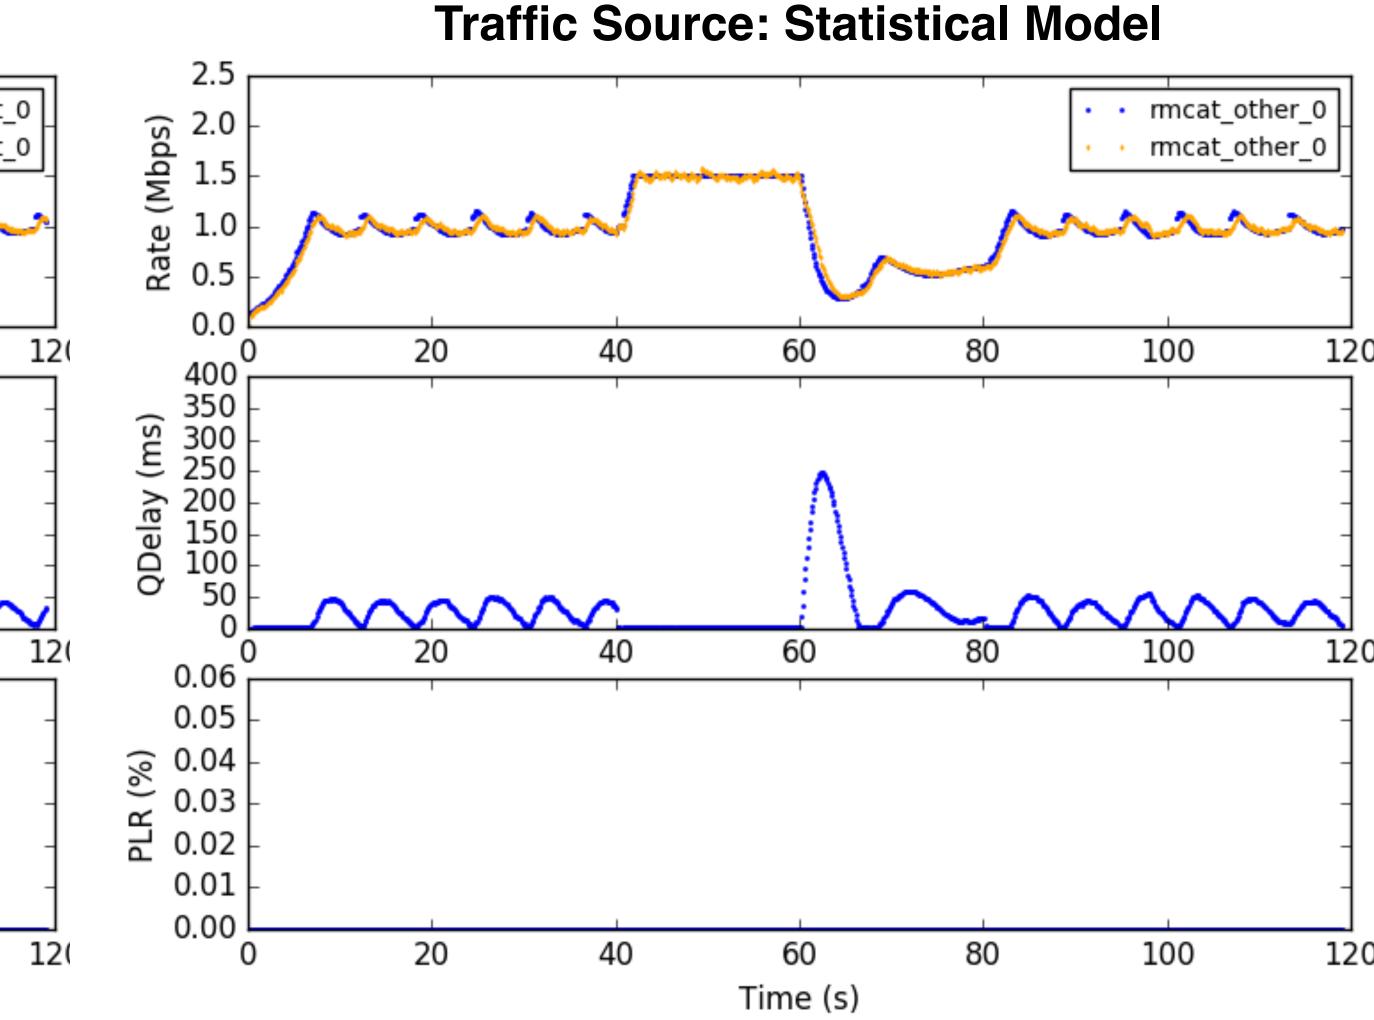

- Congestion control algorithm closely follow descriptions in draft (-04)
- This time also includes the rate shaping buffer module
- All logics moved to sender side: acting on per-packet feedback
- Works with four variants of traffic sources provided by Syncodec:
 - CBR-like (SYNCODEC_TYPE_PERFECT)
 - Based on statistical model (SYNCODEC_TYPE_STATS)
 - Trace-driven (SYNCODEC_TYPE_TRACE)
 - Content sharing (SYNCODEC_TYPE_SHARING)

Basic Test Cases

draft-ietf-rmcat-eval-test-04

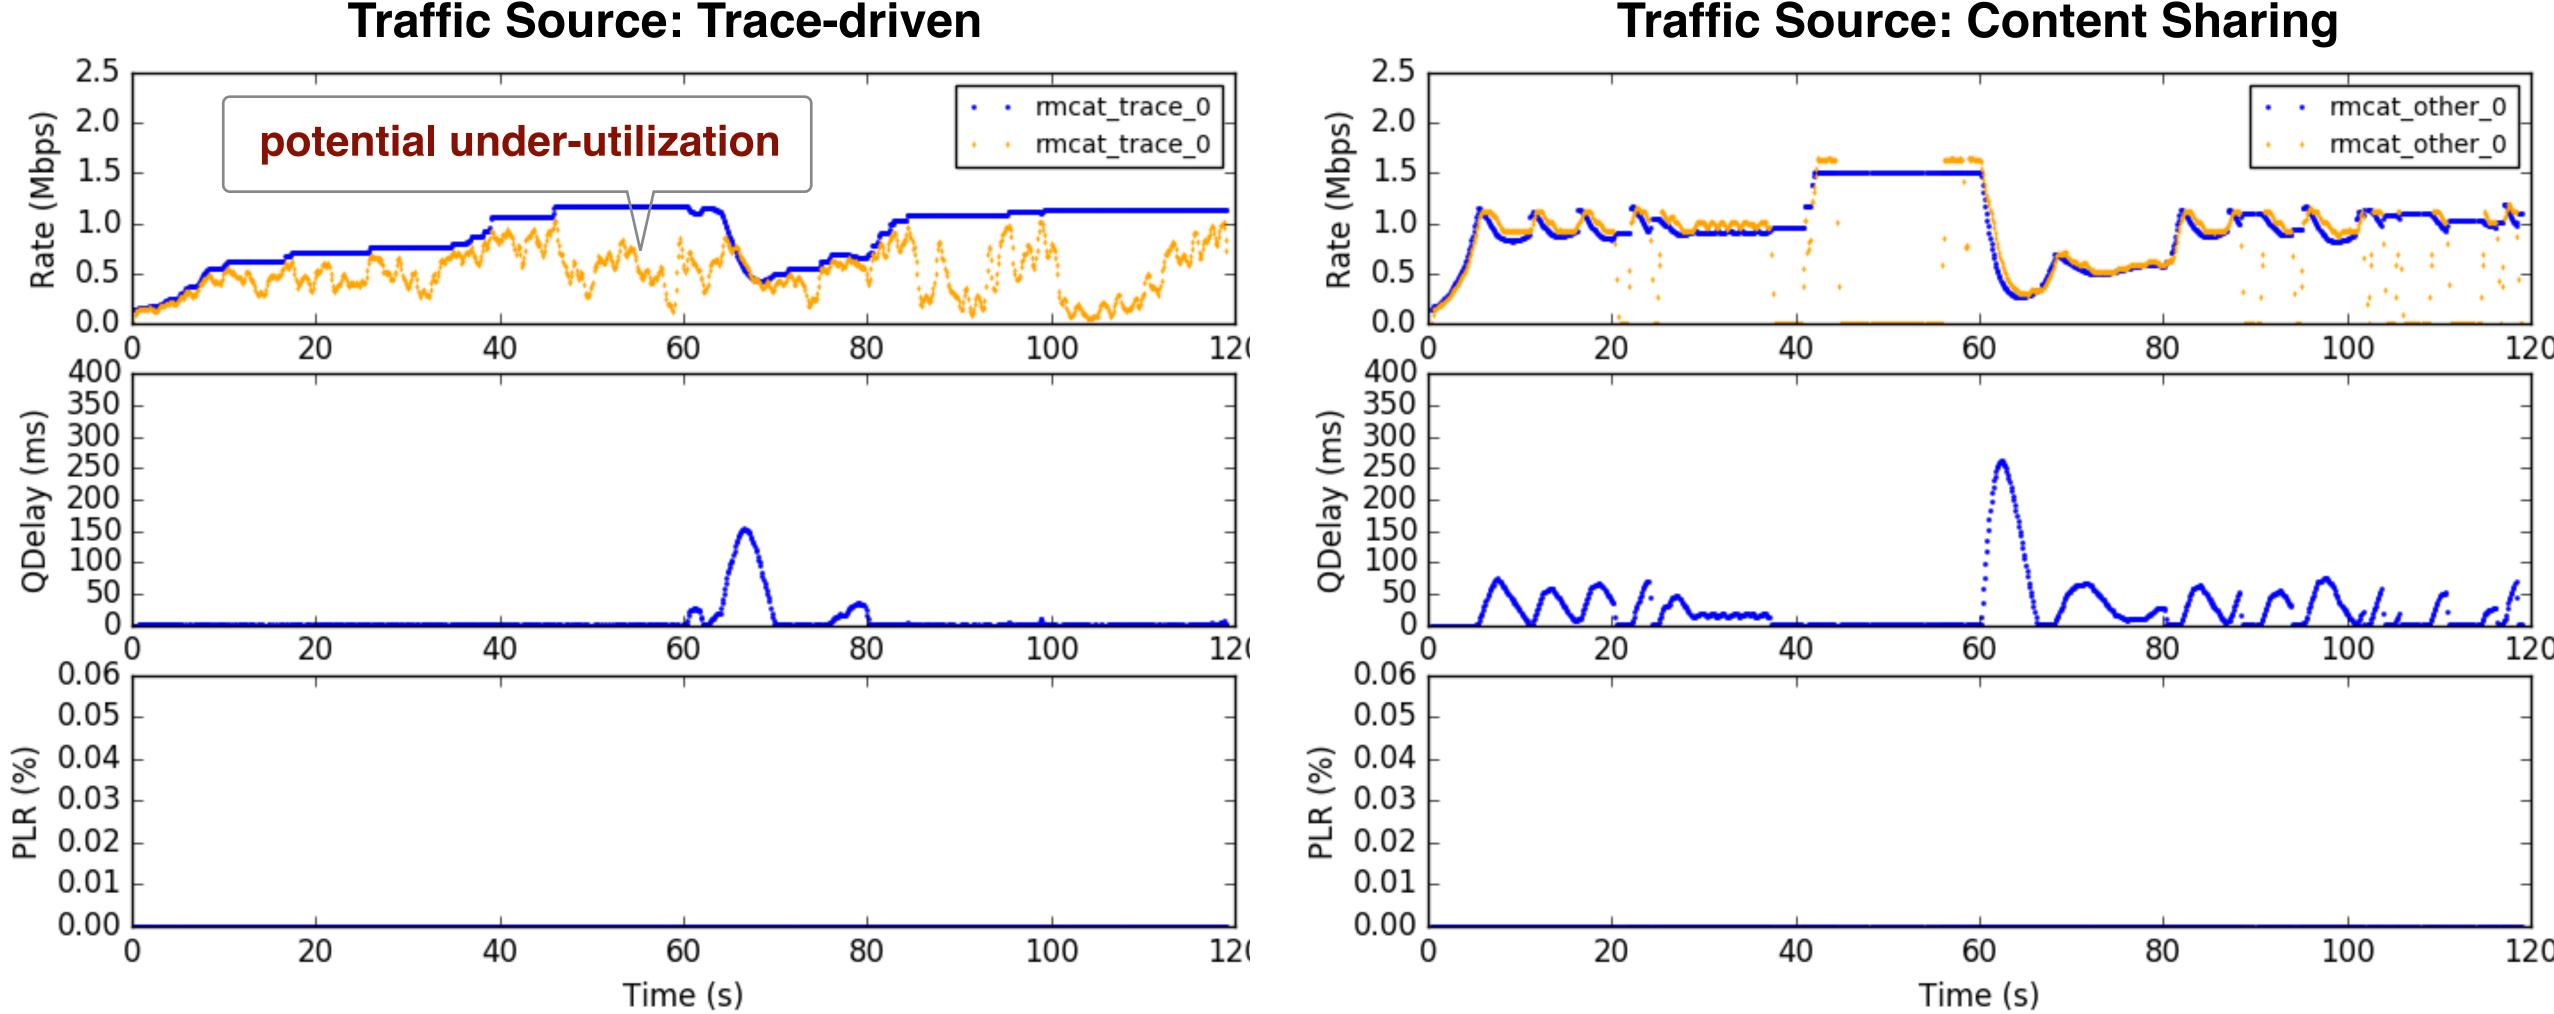

5.1: Variable Available Capacity with a Single Flow

Traffic Source: CBR-like 2.5 rmcat_0 0.5 Rbps) 1.0 0.5 . . 2.0 rmcat_0 1.5 .0 0.0 20 40 60 80 100 400 350 (ms) 300 250 QDelay 200 150 100 50 60 80 20 40 100 0.06 0.05 (%) 0.04 0.03 0.02 0.01 0.00 L 0 20 40 60 80 100 Time (s)

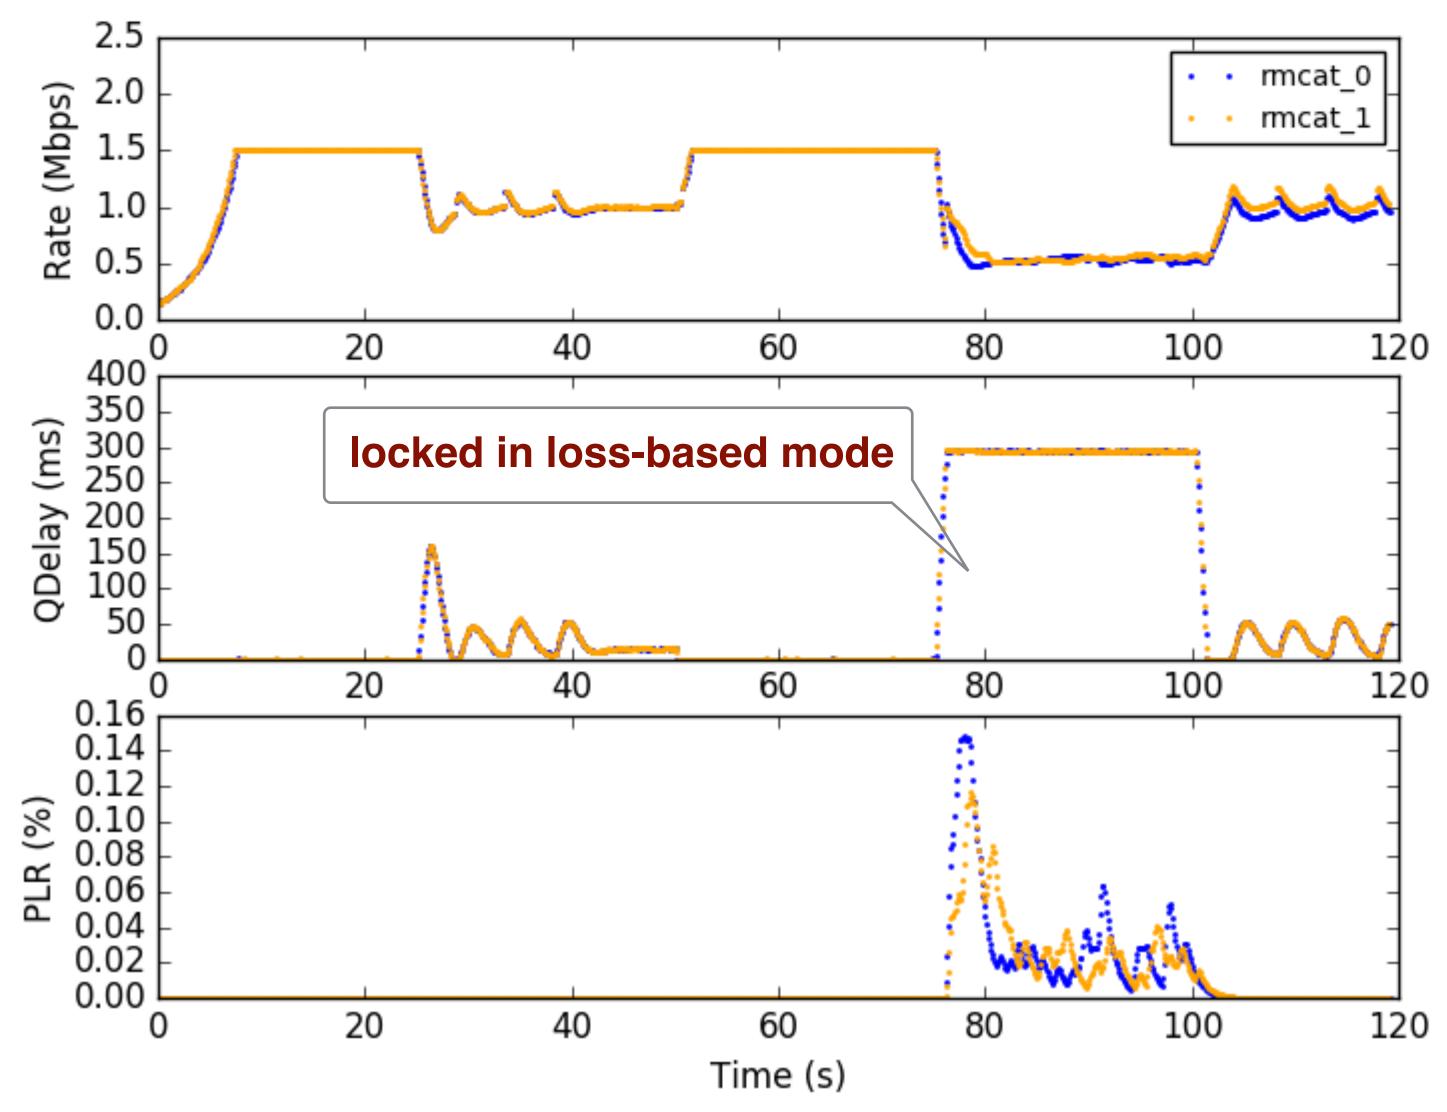

5.1: Variable Available Capacity with a Single Flow

Traffic Source: Trace-driven

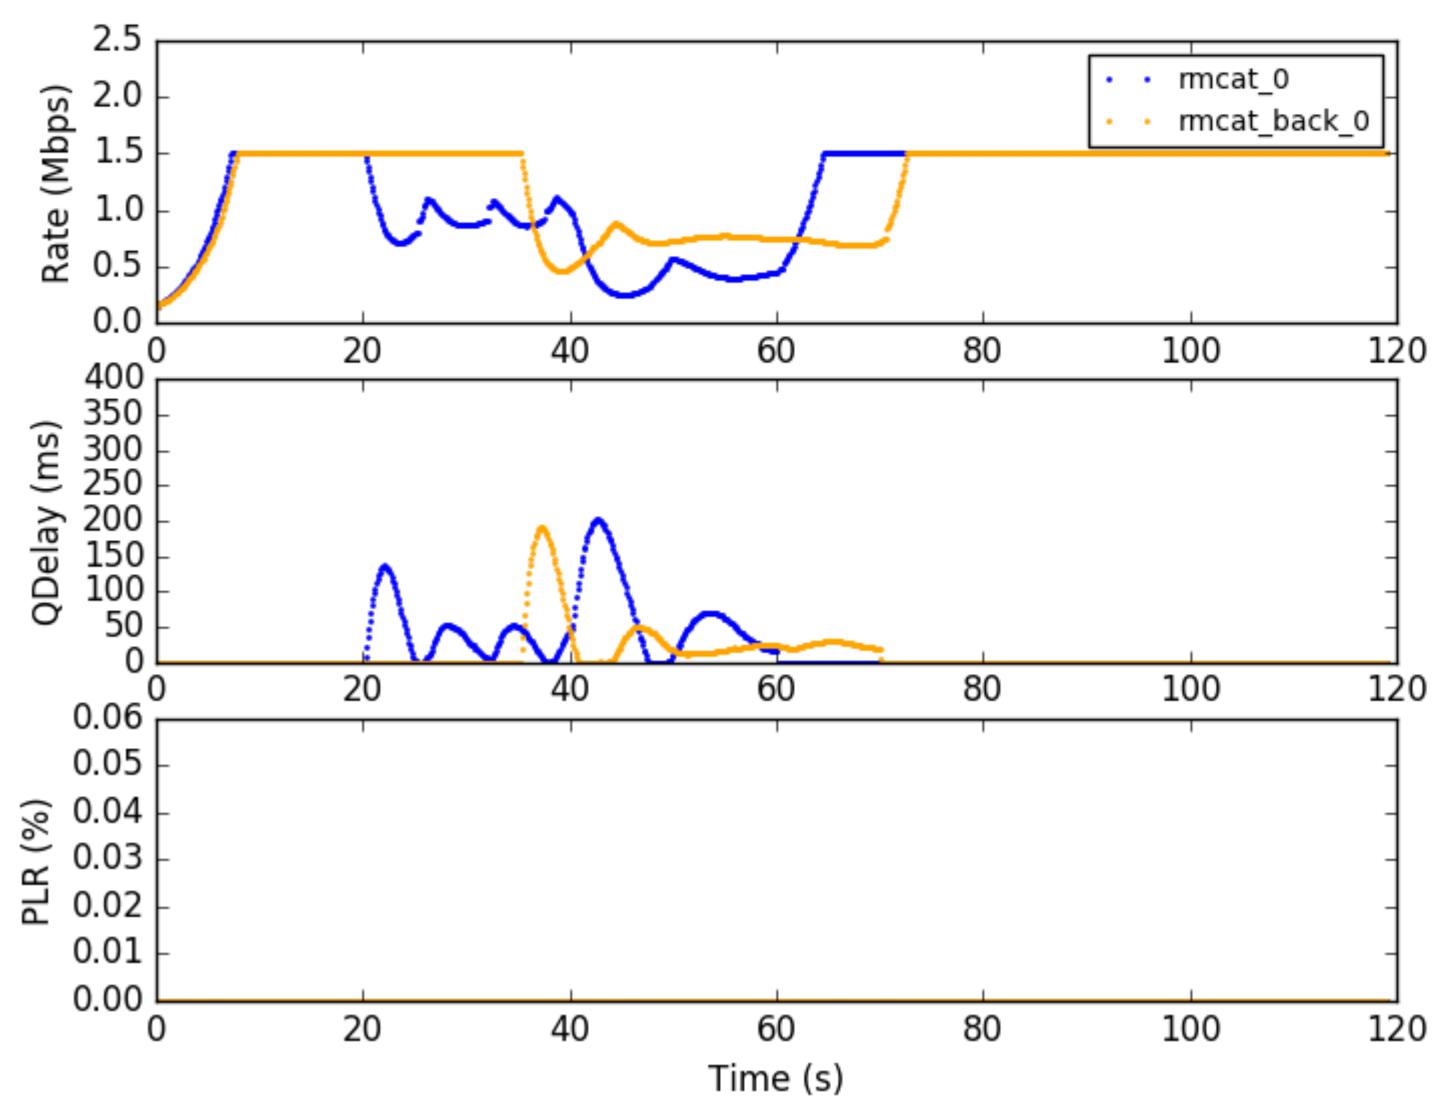

6

5.2: Variable Available Capacity with Multiple Flows

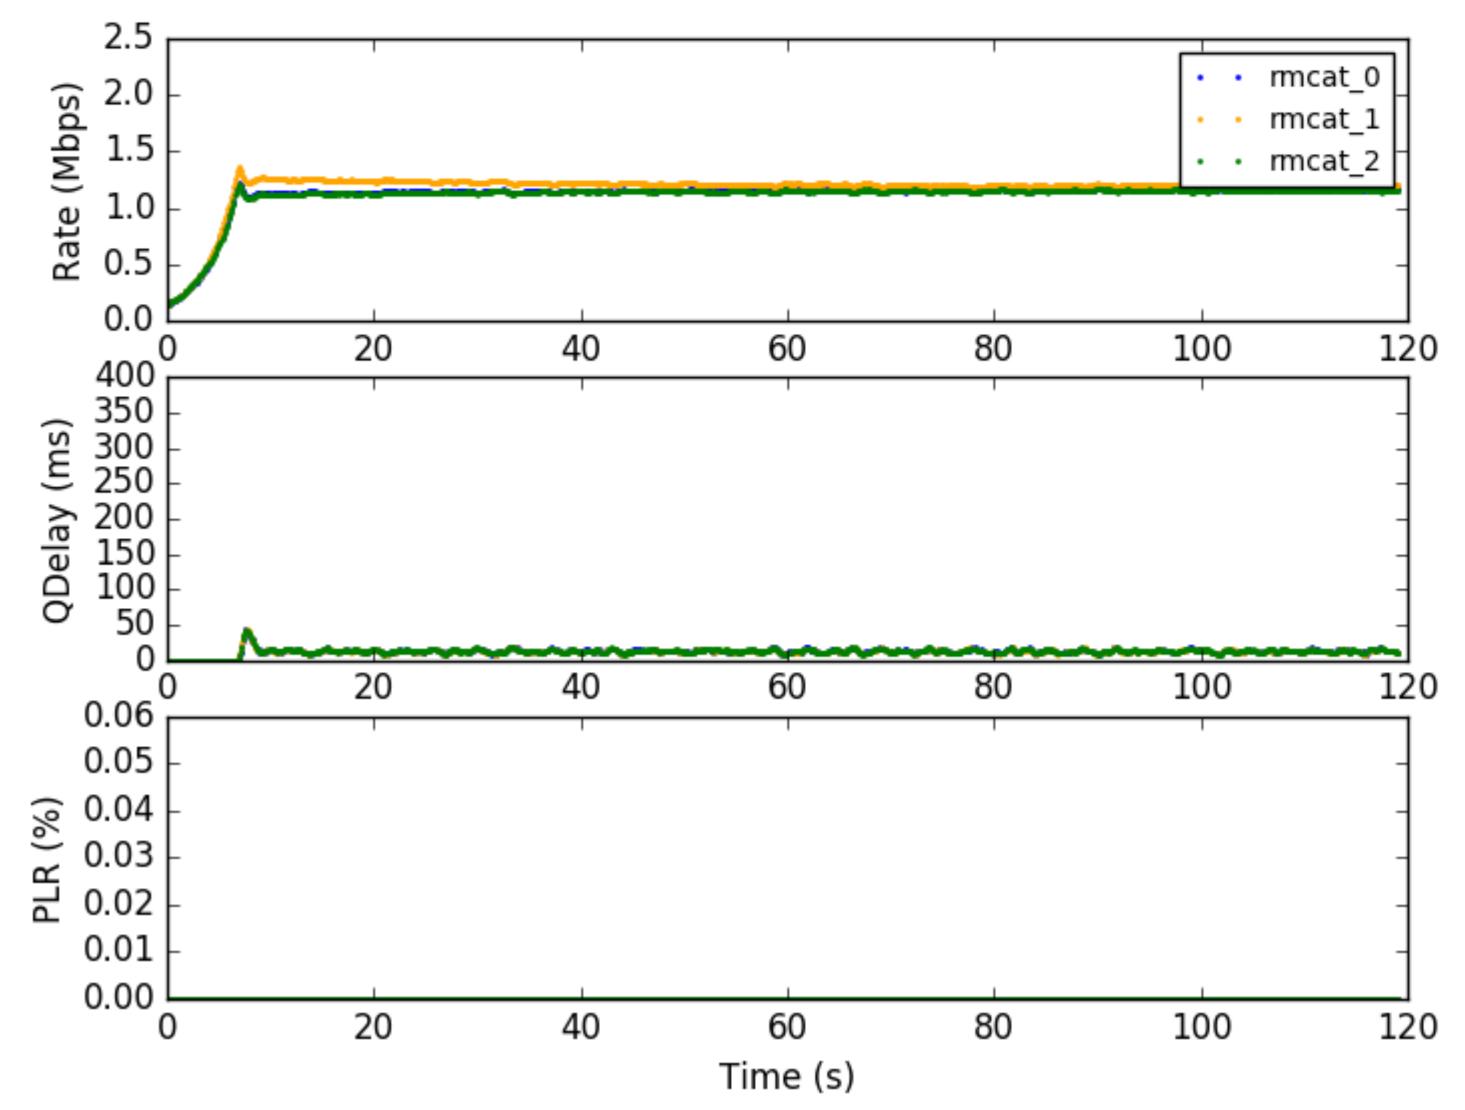

5.3: Congested Feedback Link with Bi-directional Flows

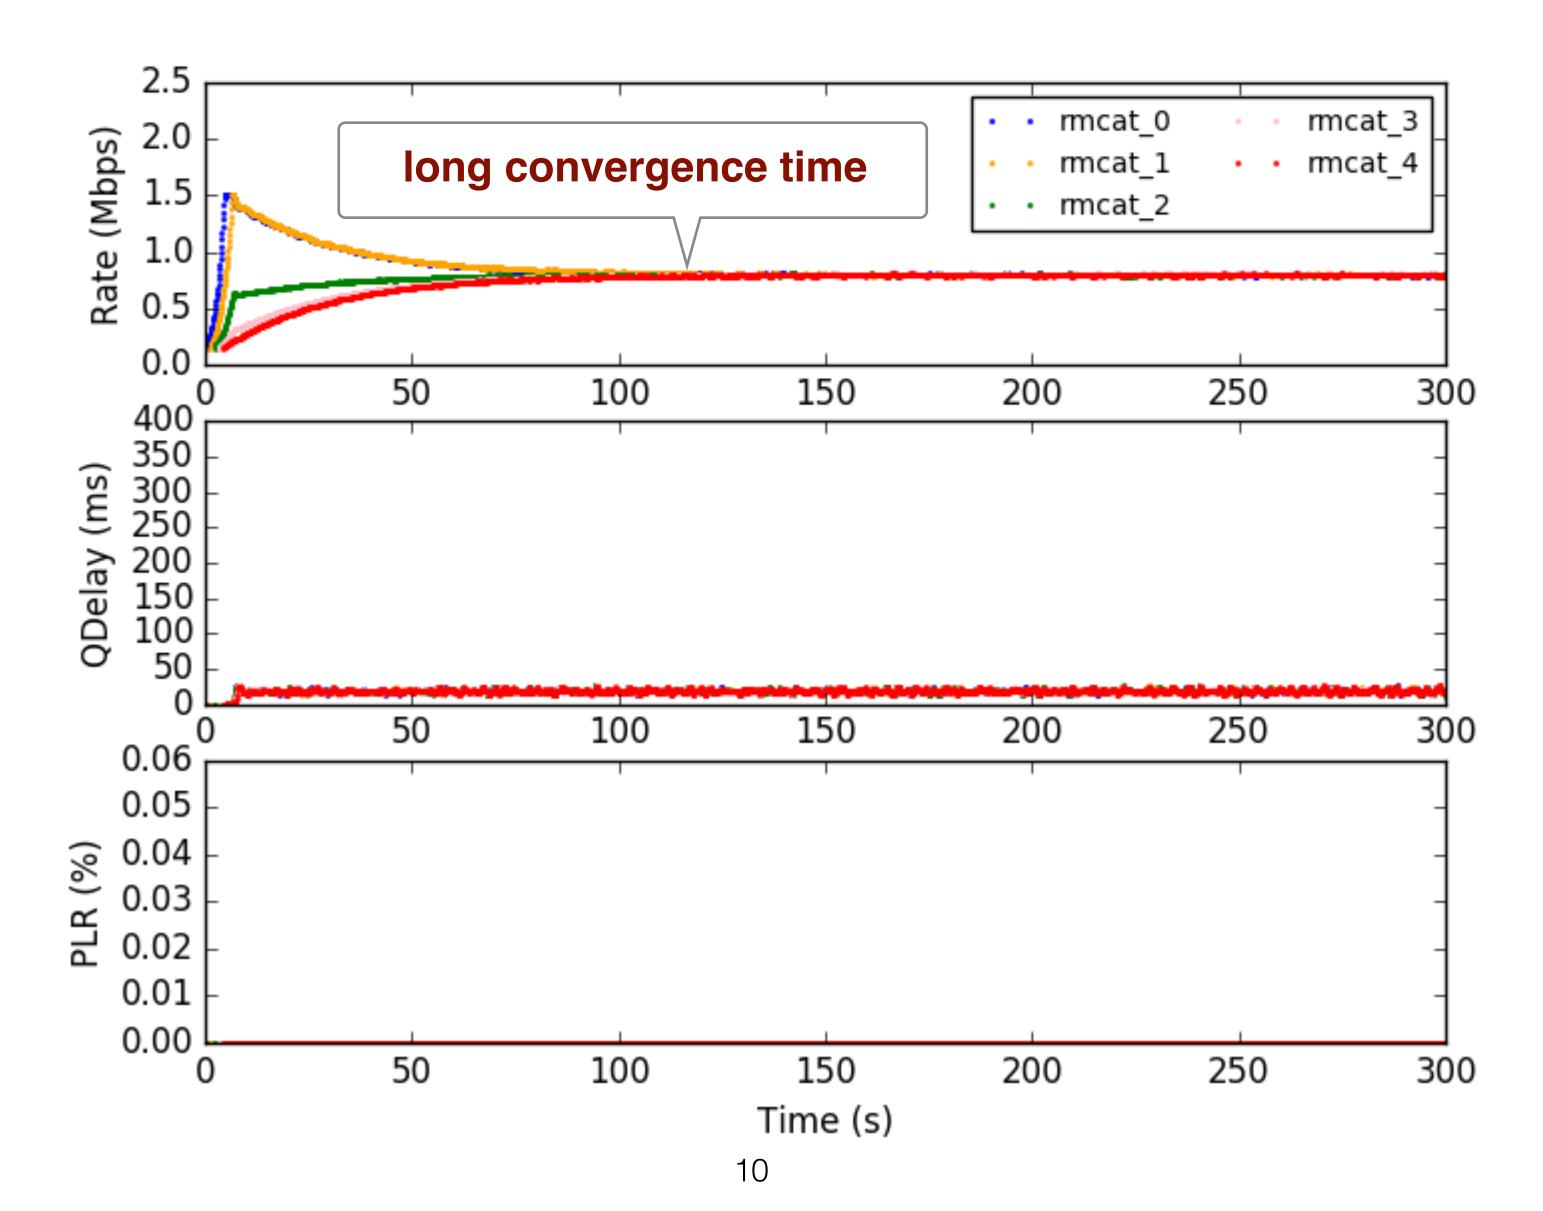

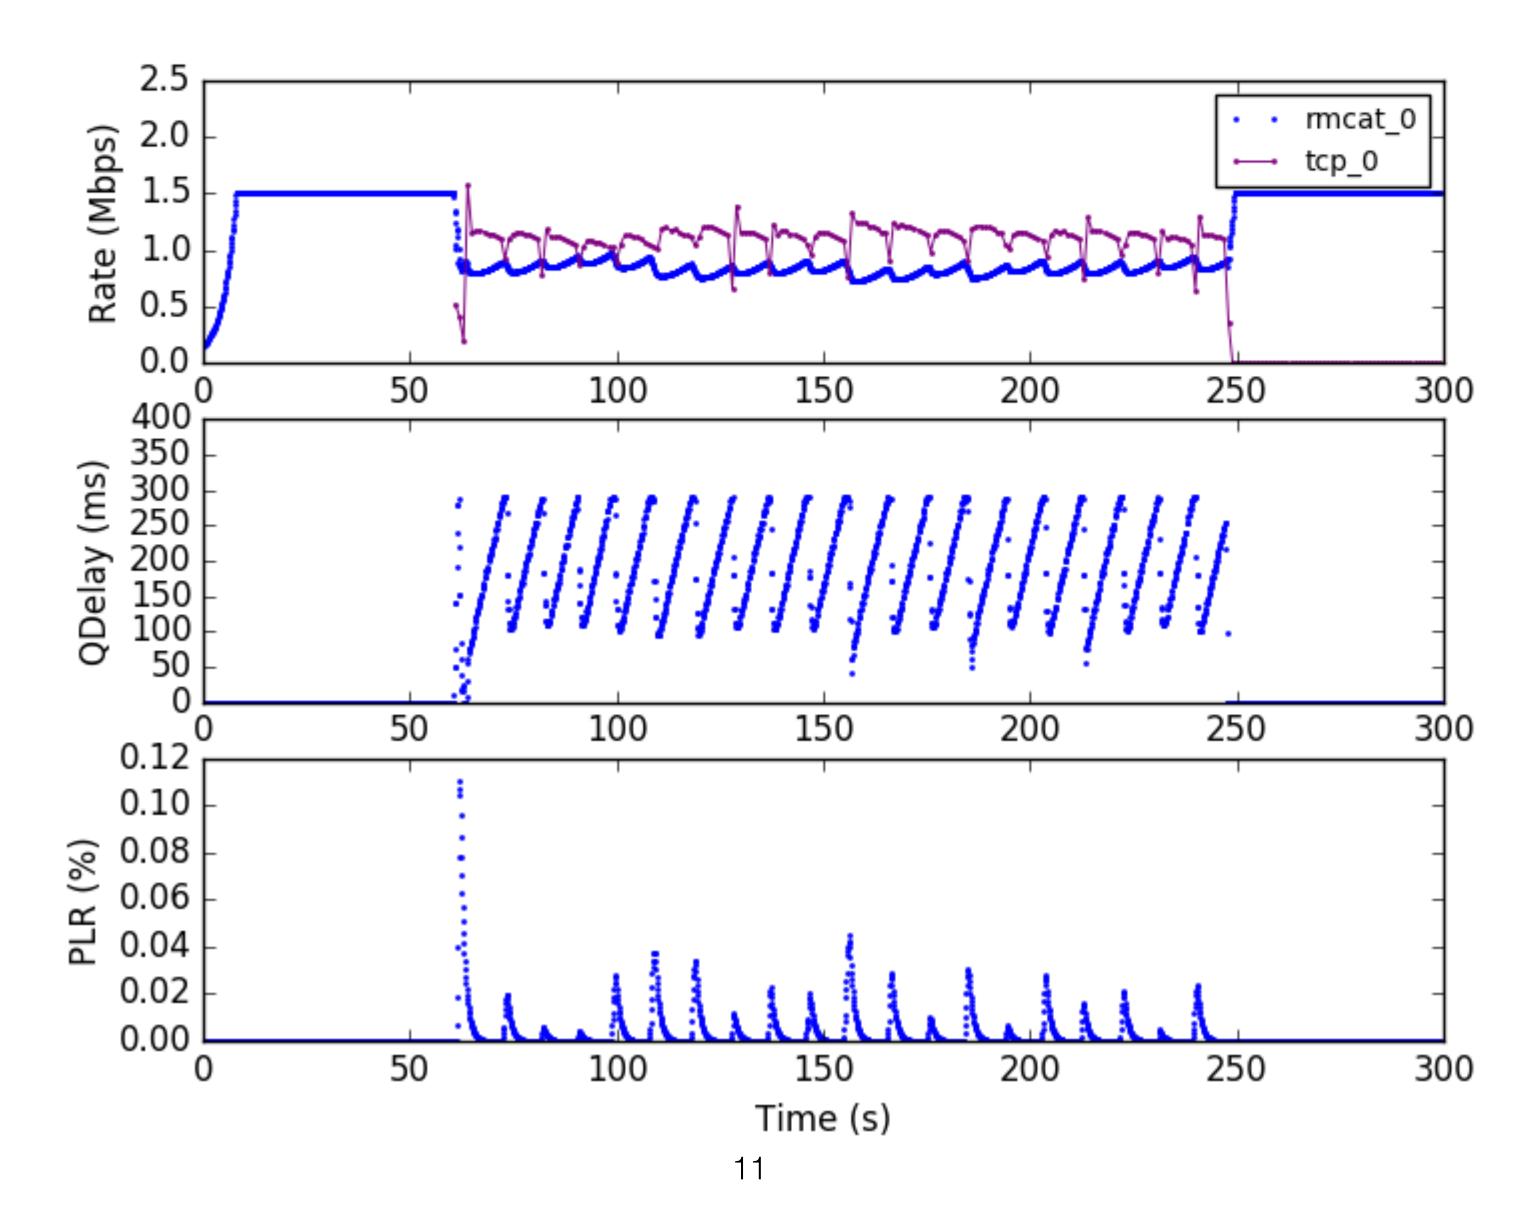

5.4: Multiple Competing RMCAT Flows

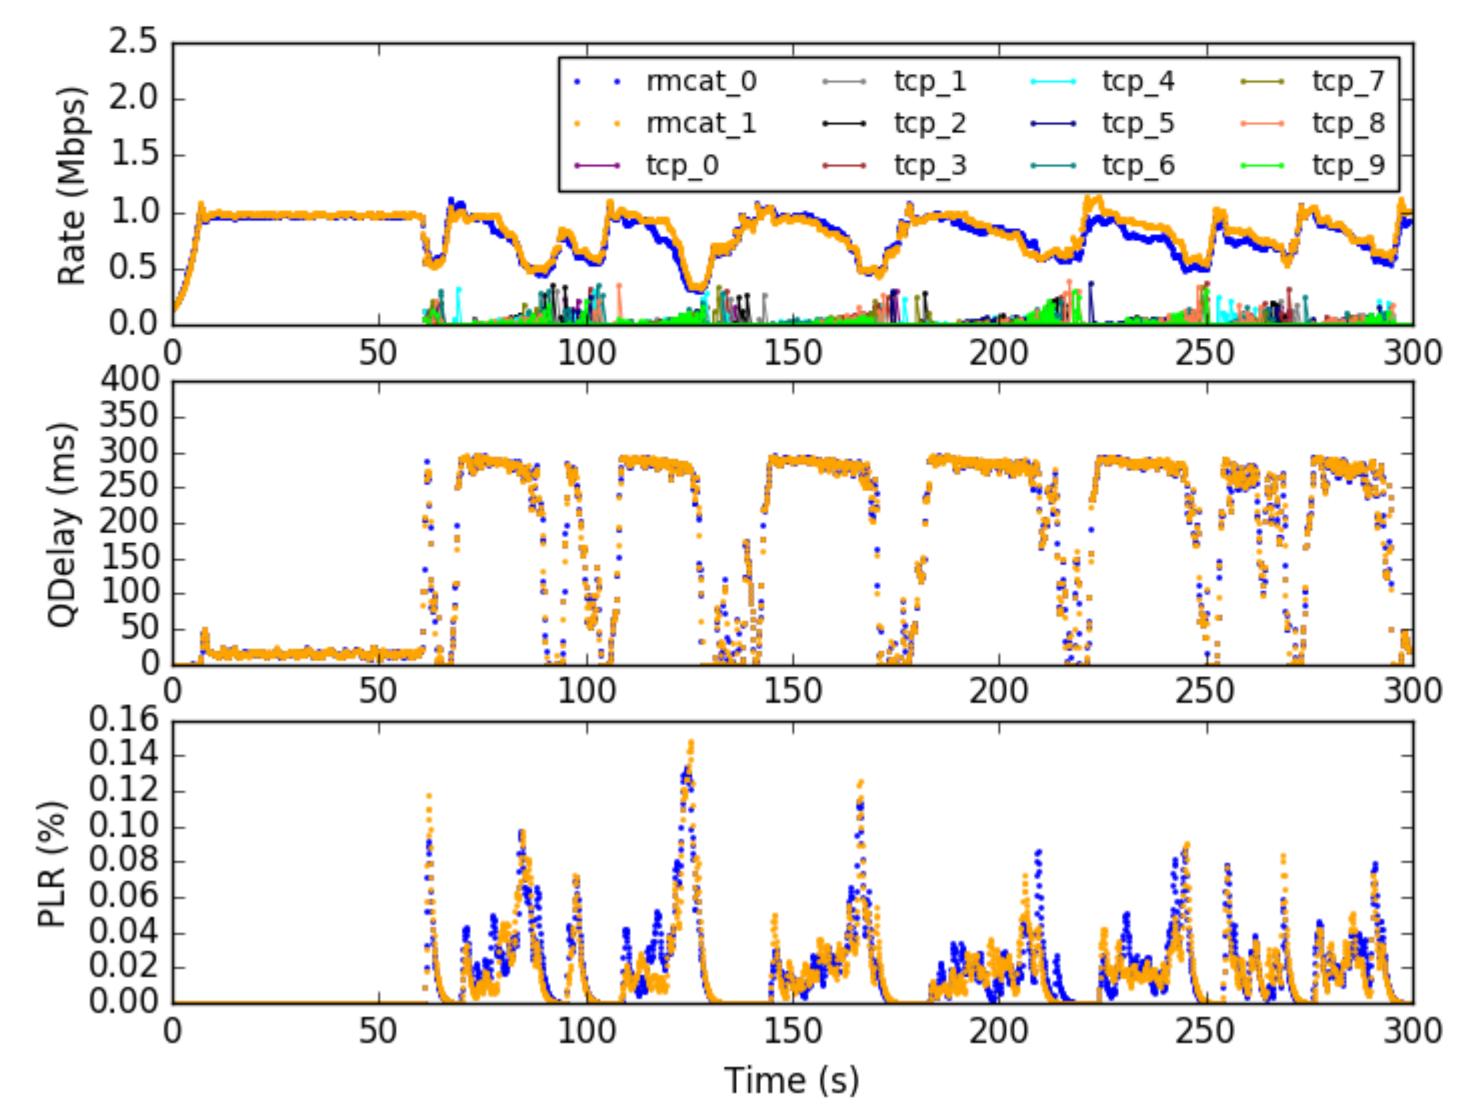

5.5: Round Trip Time Fairness

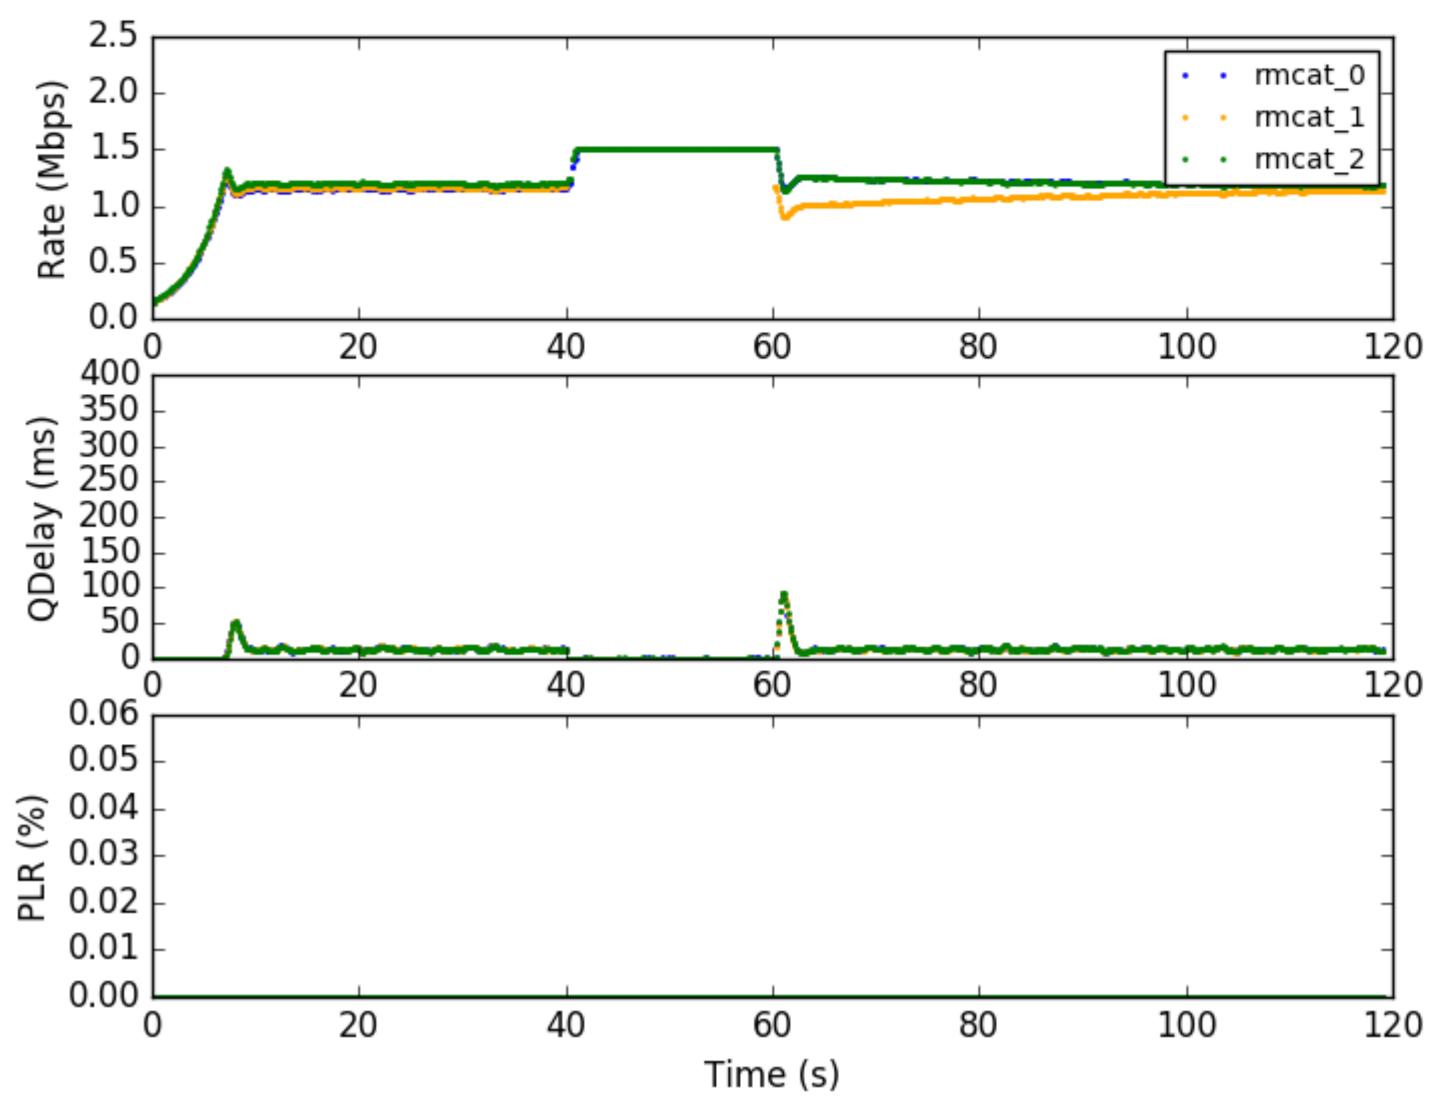

5.6: RMCAT Flow Competing with a Long TCP Flow

5.7: RMCAT Flow Competing with Short TCP Flows

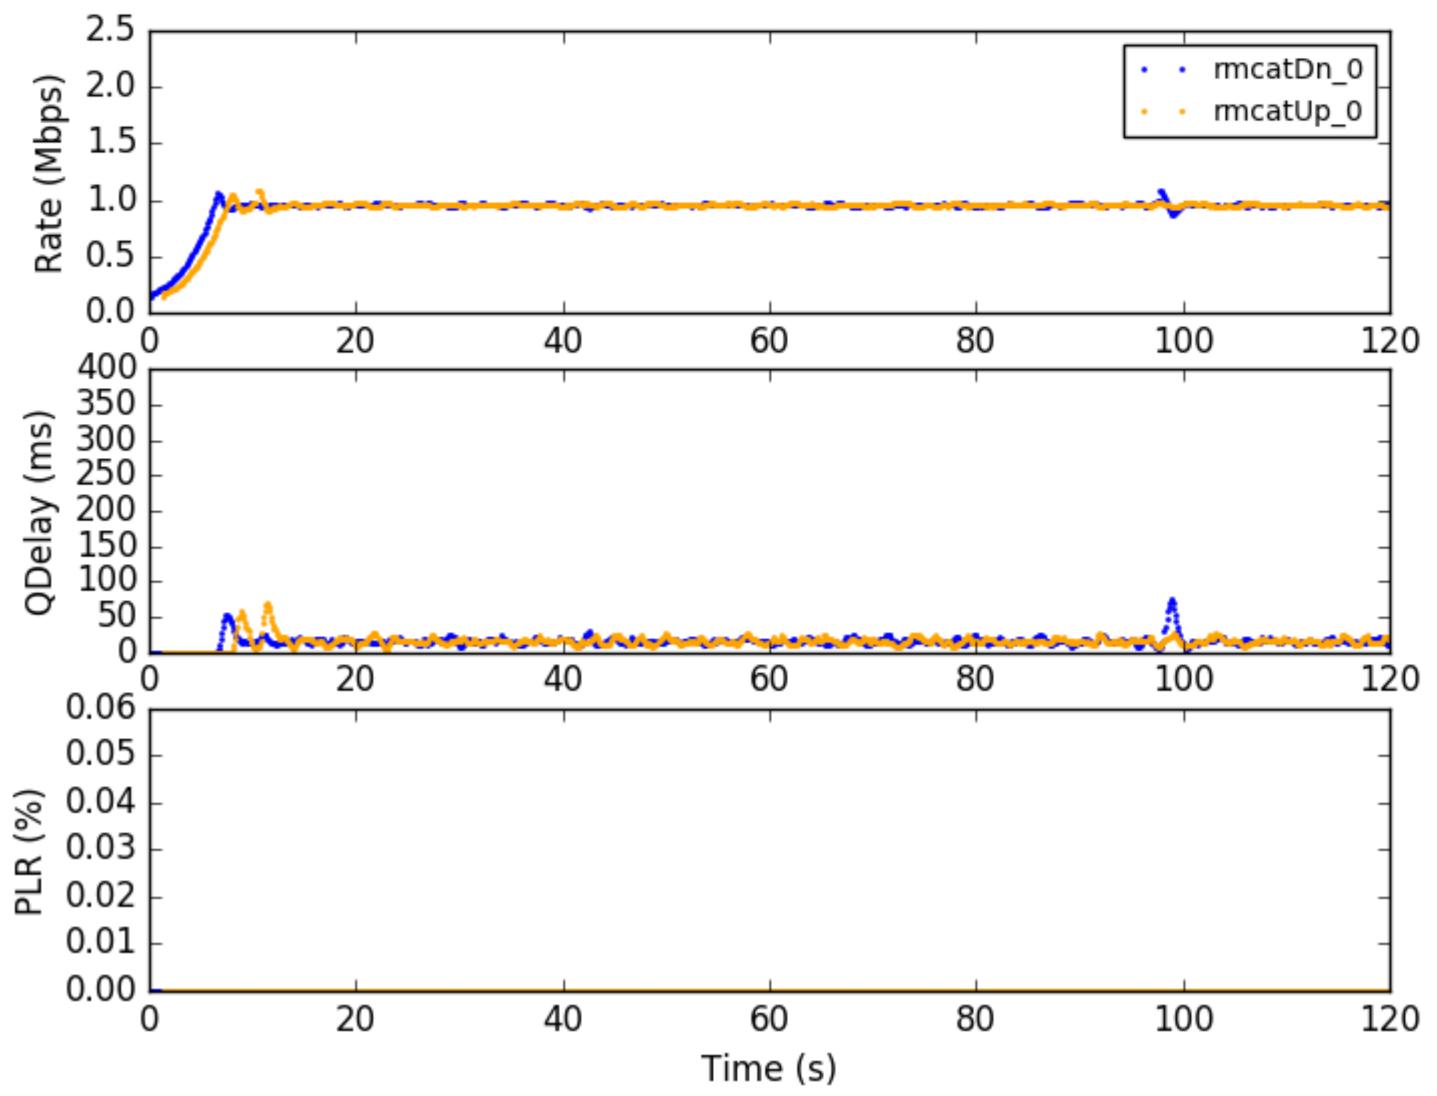

5.8: Media Pause and Resume

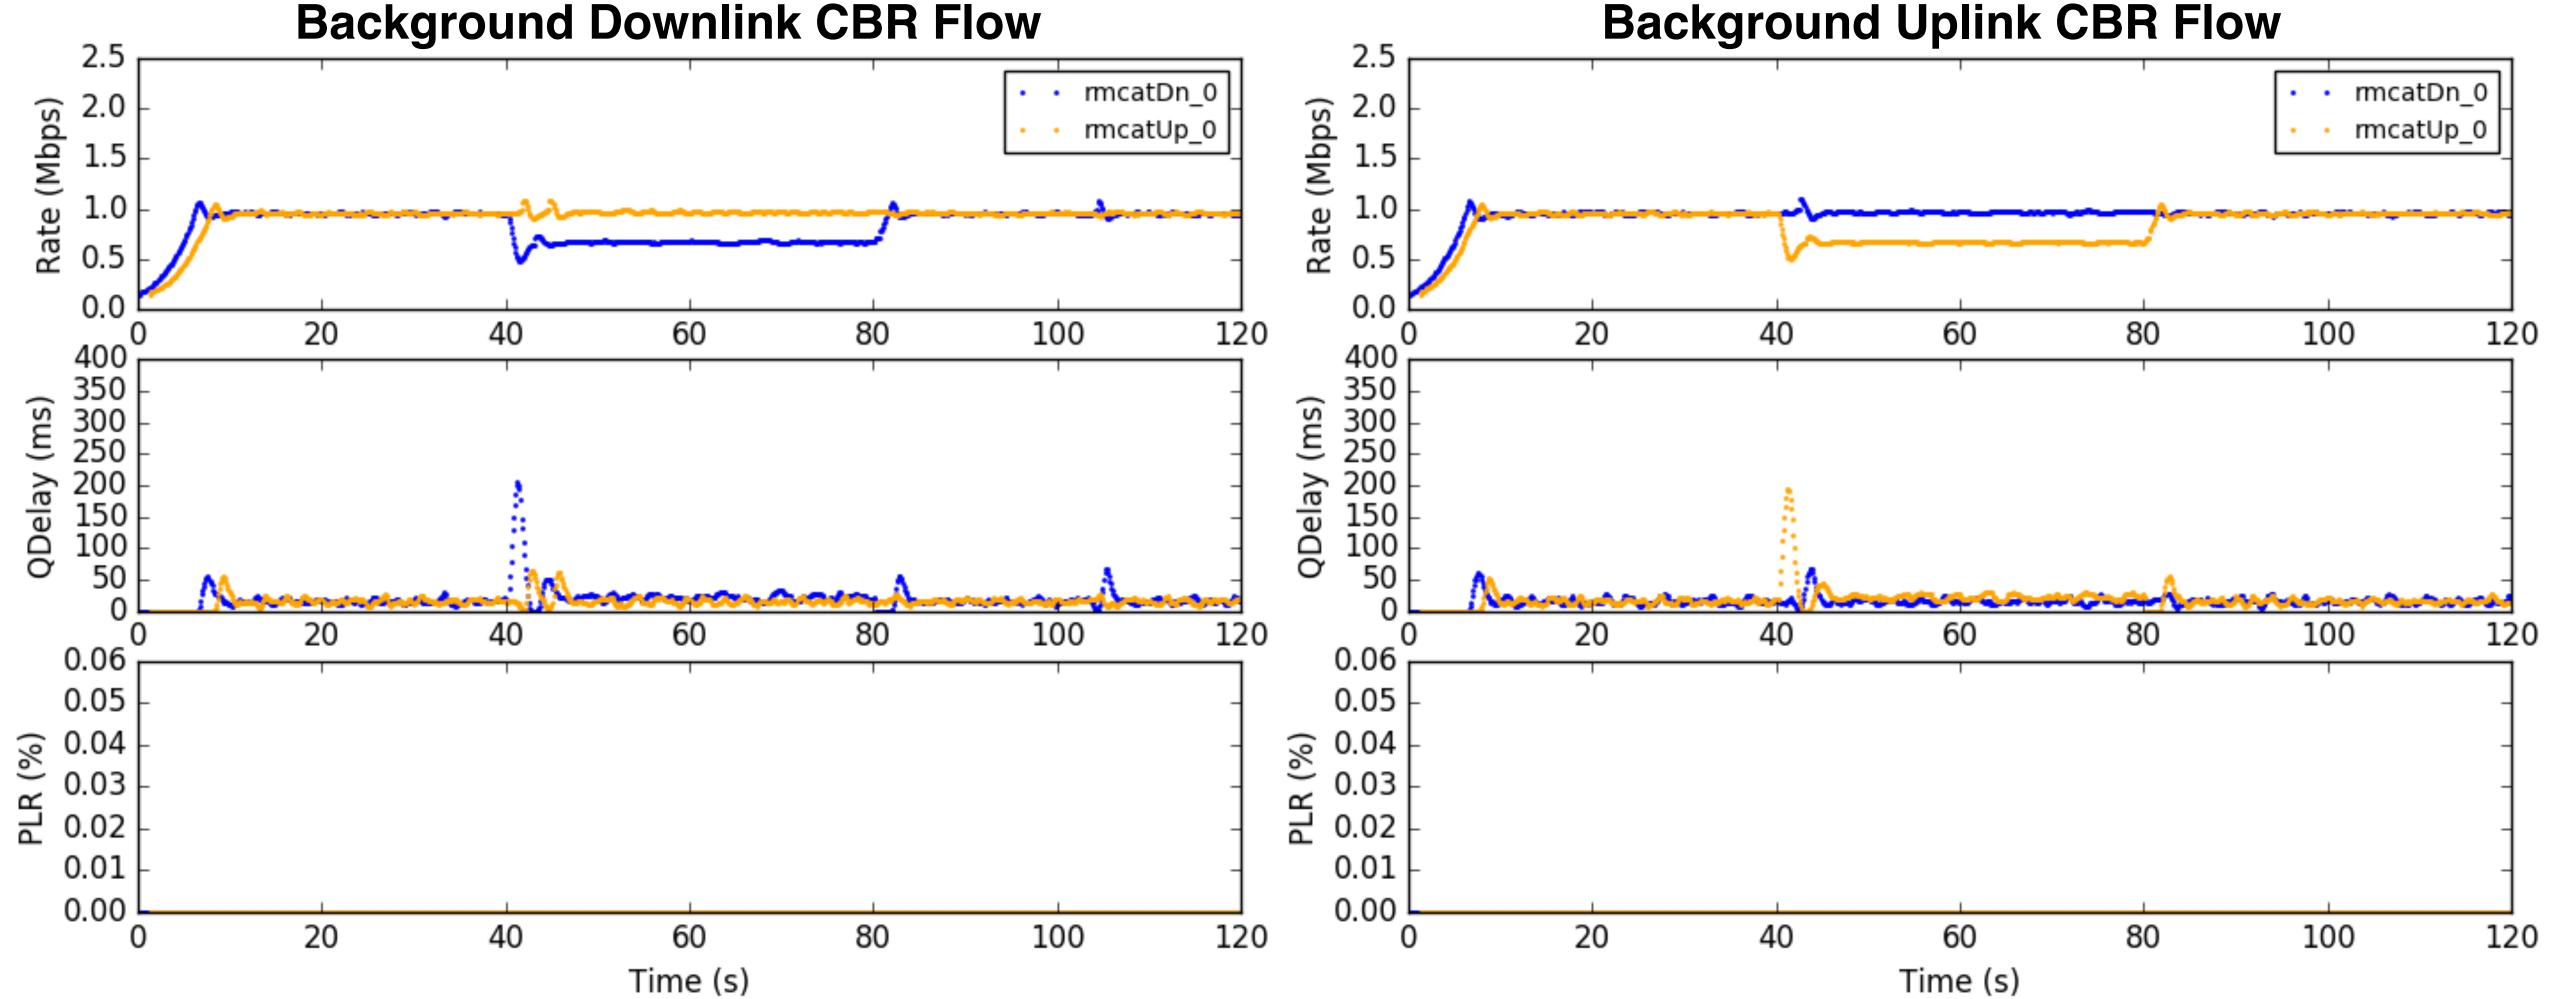

Wifi Test Cases draft-ietf-rmcat-wireless-tests-03

4.1: Bottleneck in Wired Network — Bidirectional RMCAT Flows

4.1: Bottleneck in Wired Network Bidirectional RMCAT Flows w. Background CBR Flow

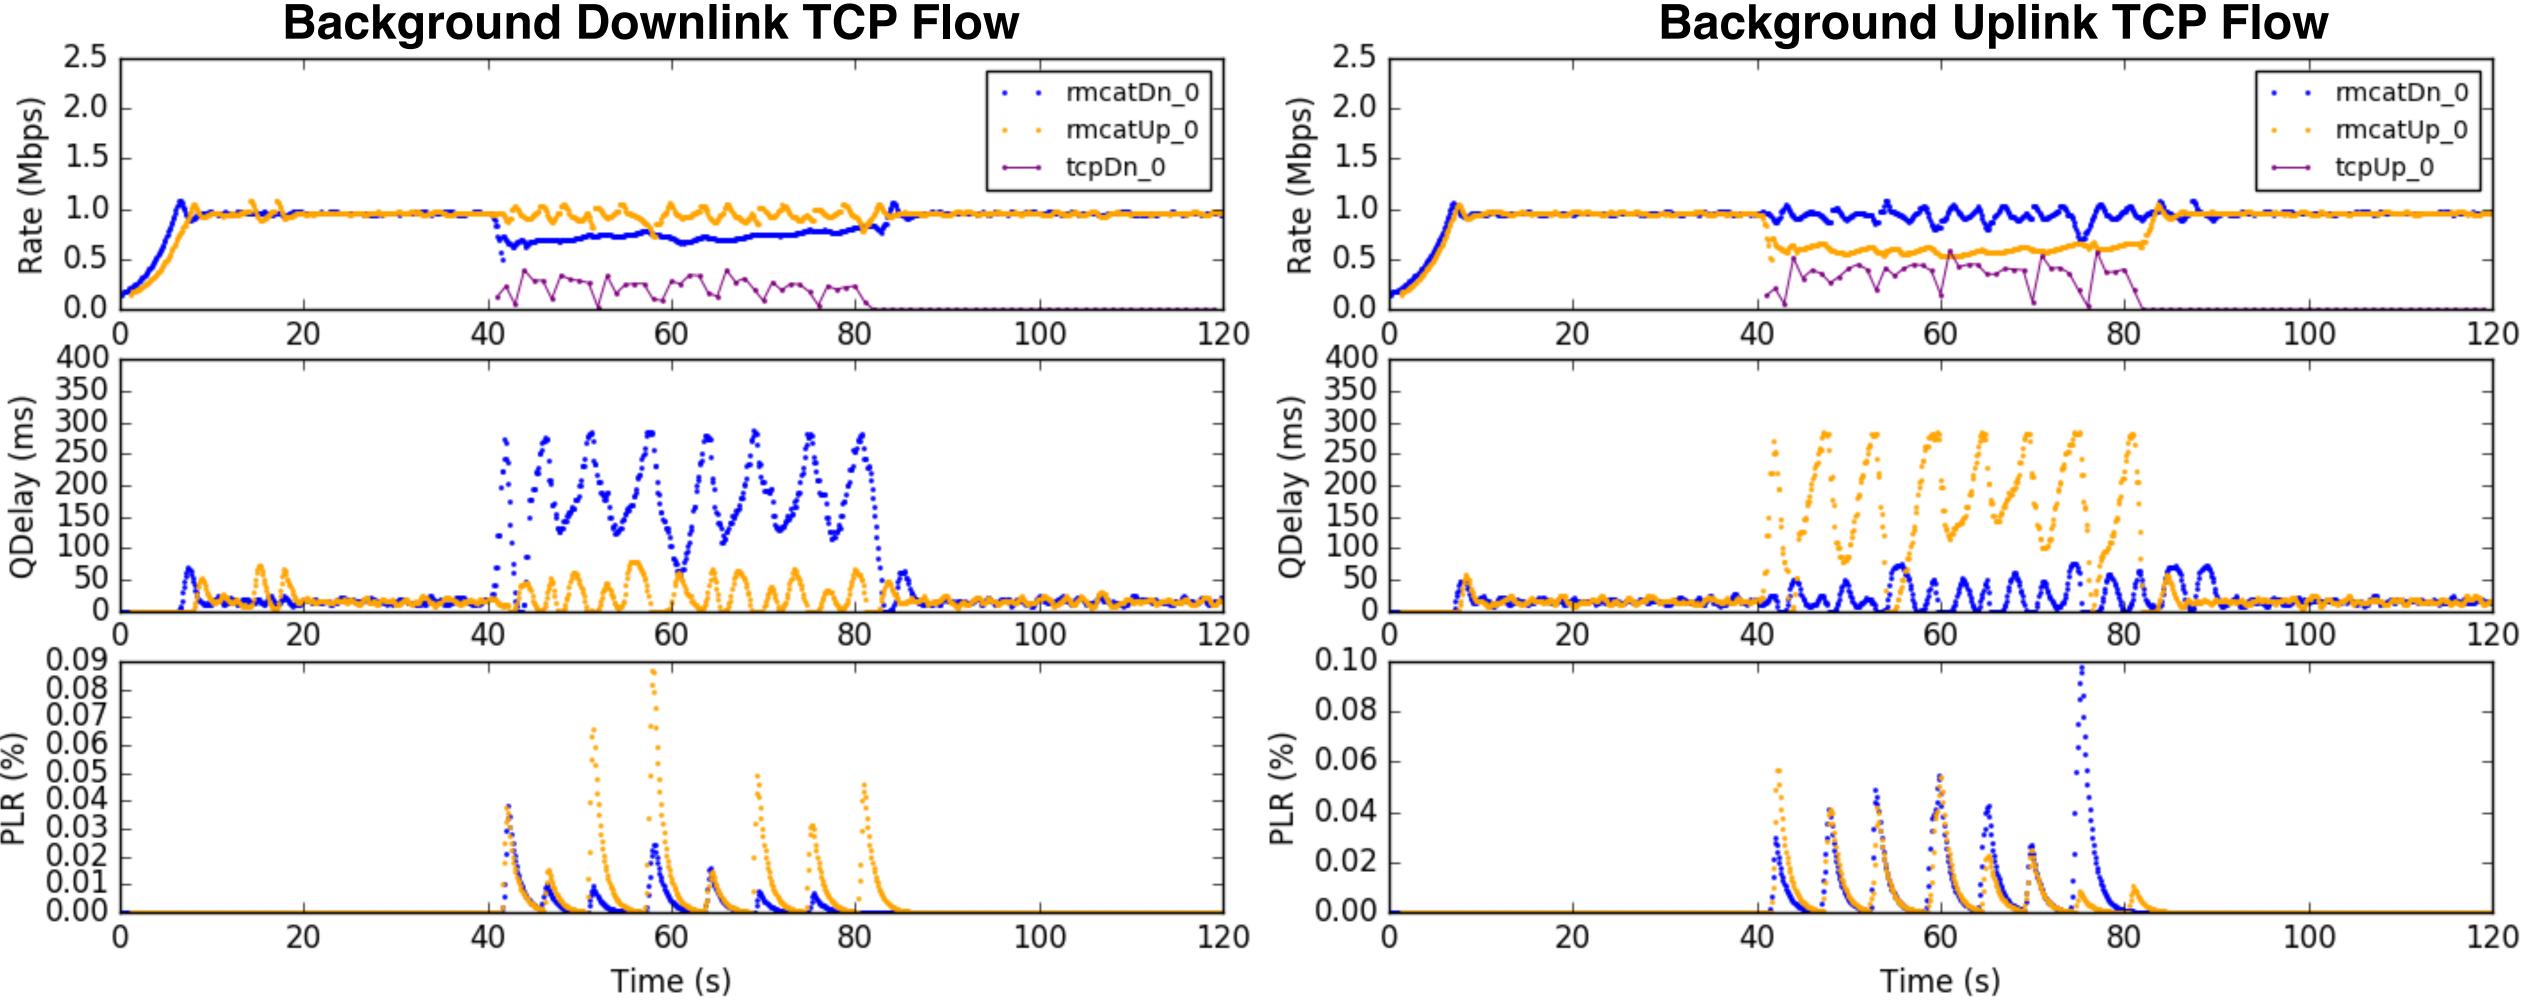

Background Downlink CBR Flow

4.1: Bottleneck in Wired Network Bidirectional RMCAT Flows w. Background TCP Flow

Background Downlink TCP Flow

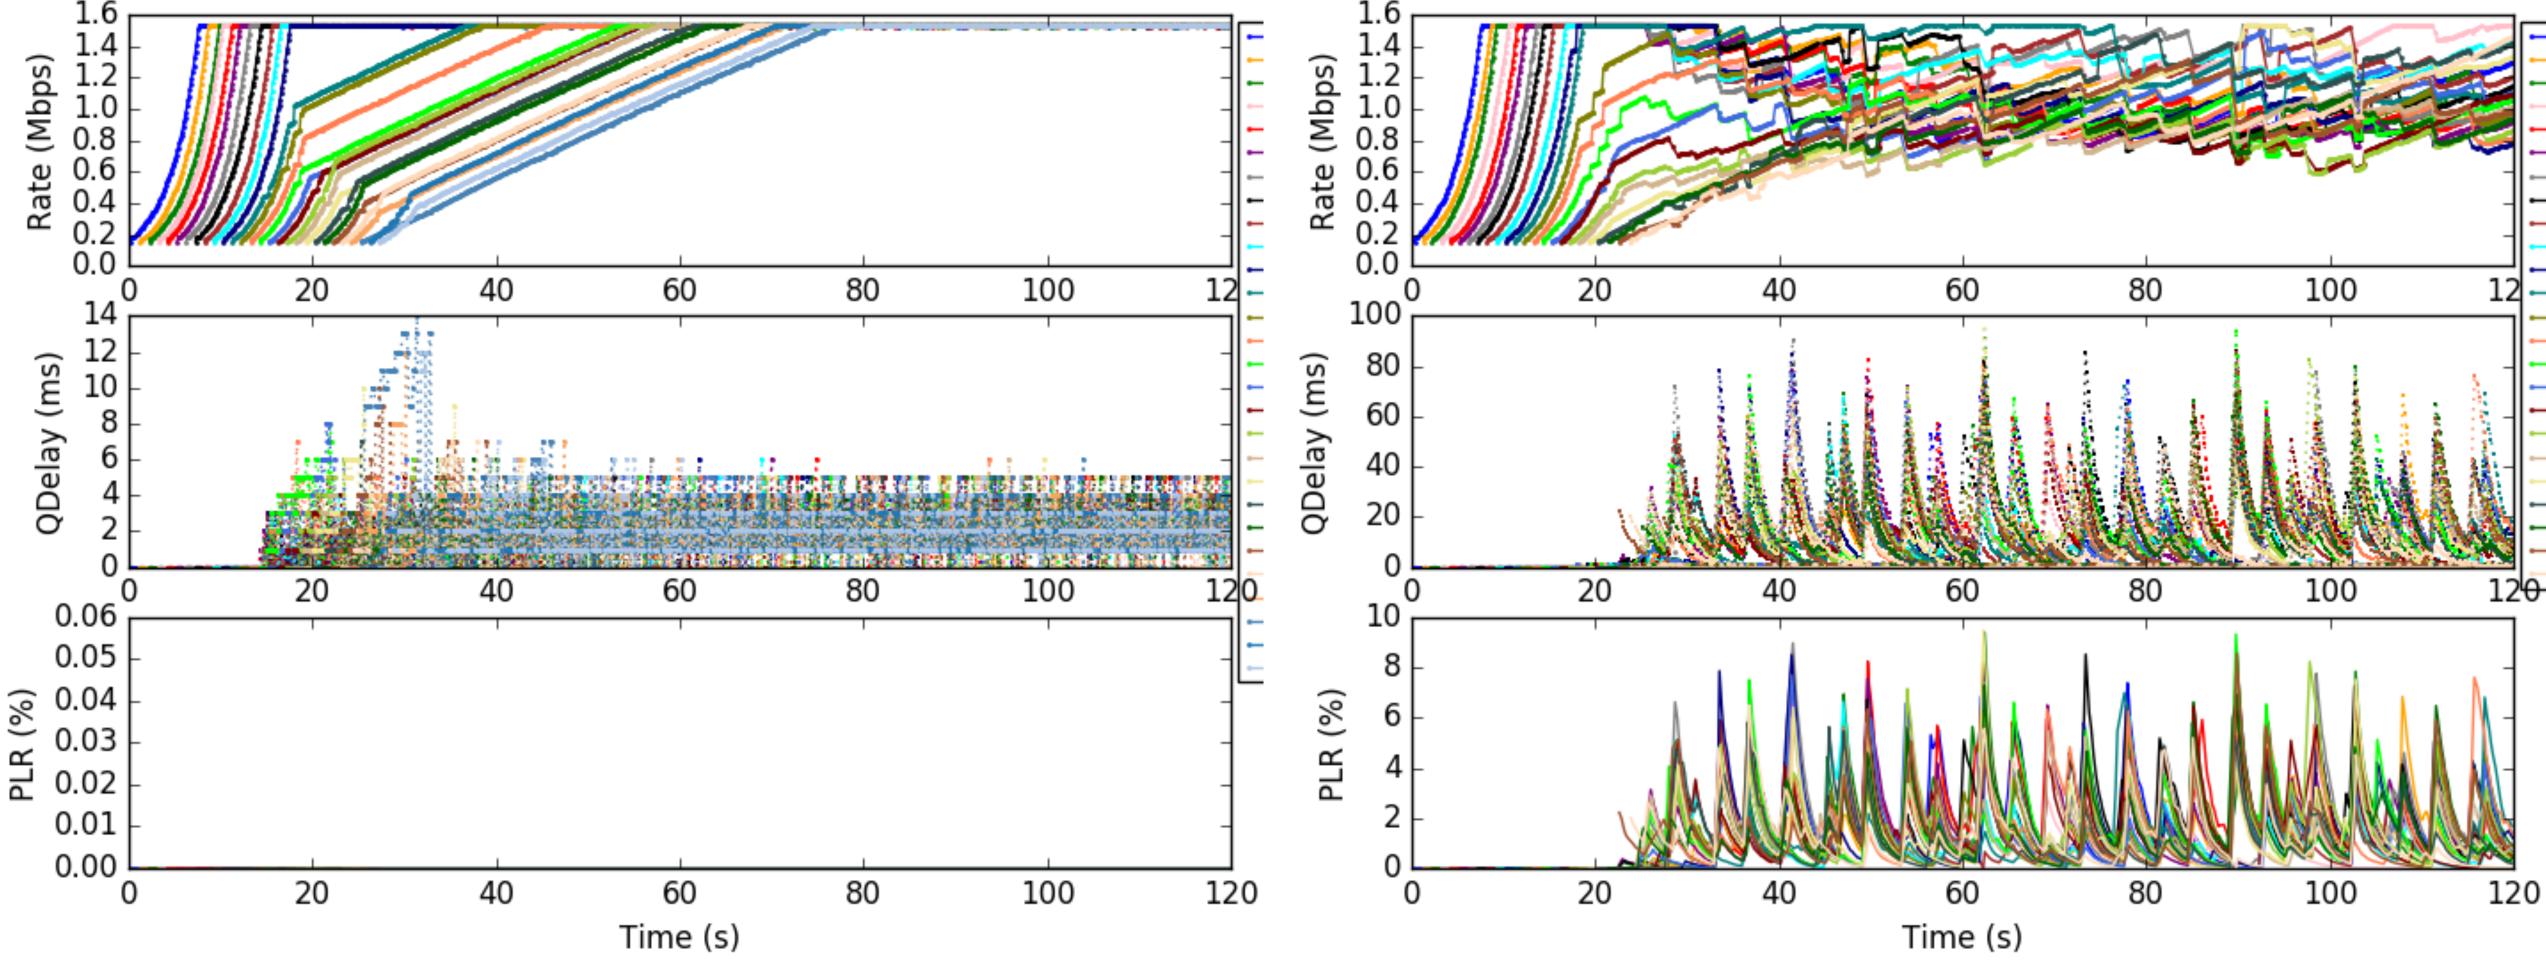

17

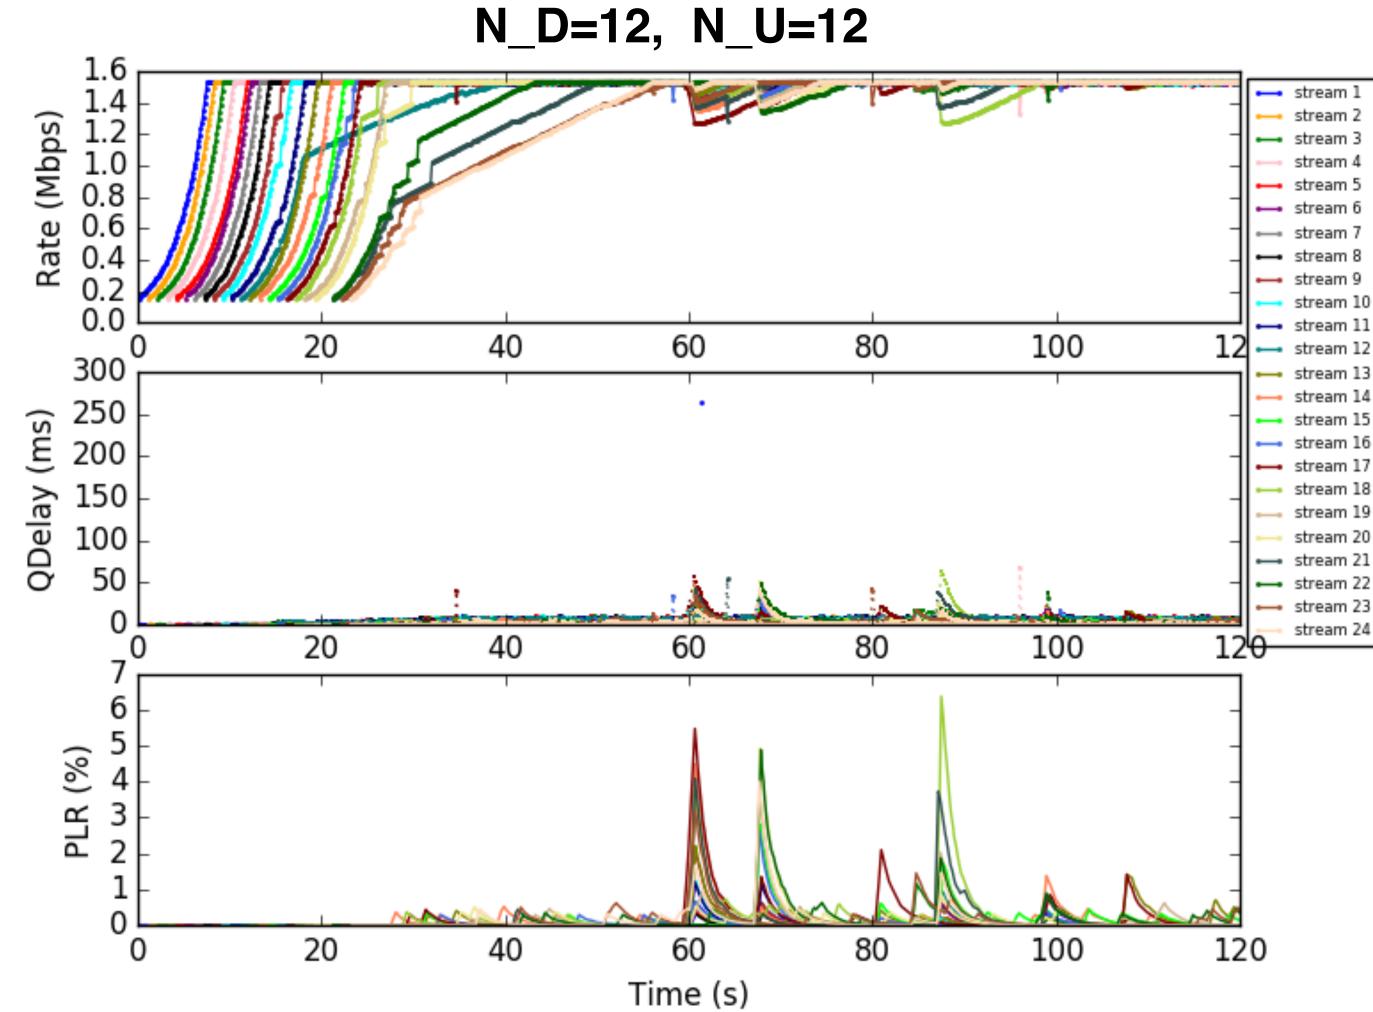

4.2: Bottleneck in Wi-Fi Network — Multiple Downlink/Uplink RMCAT Flows

N_D=24 Downlink RMCAT Flows

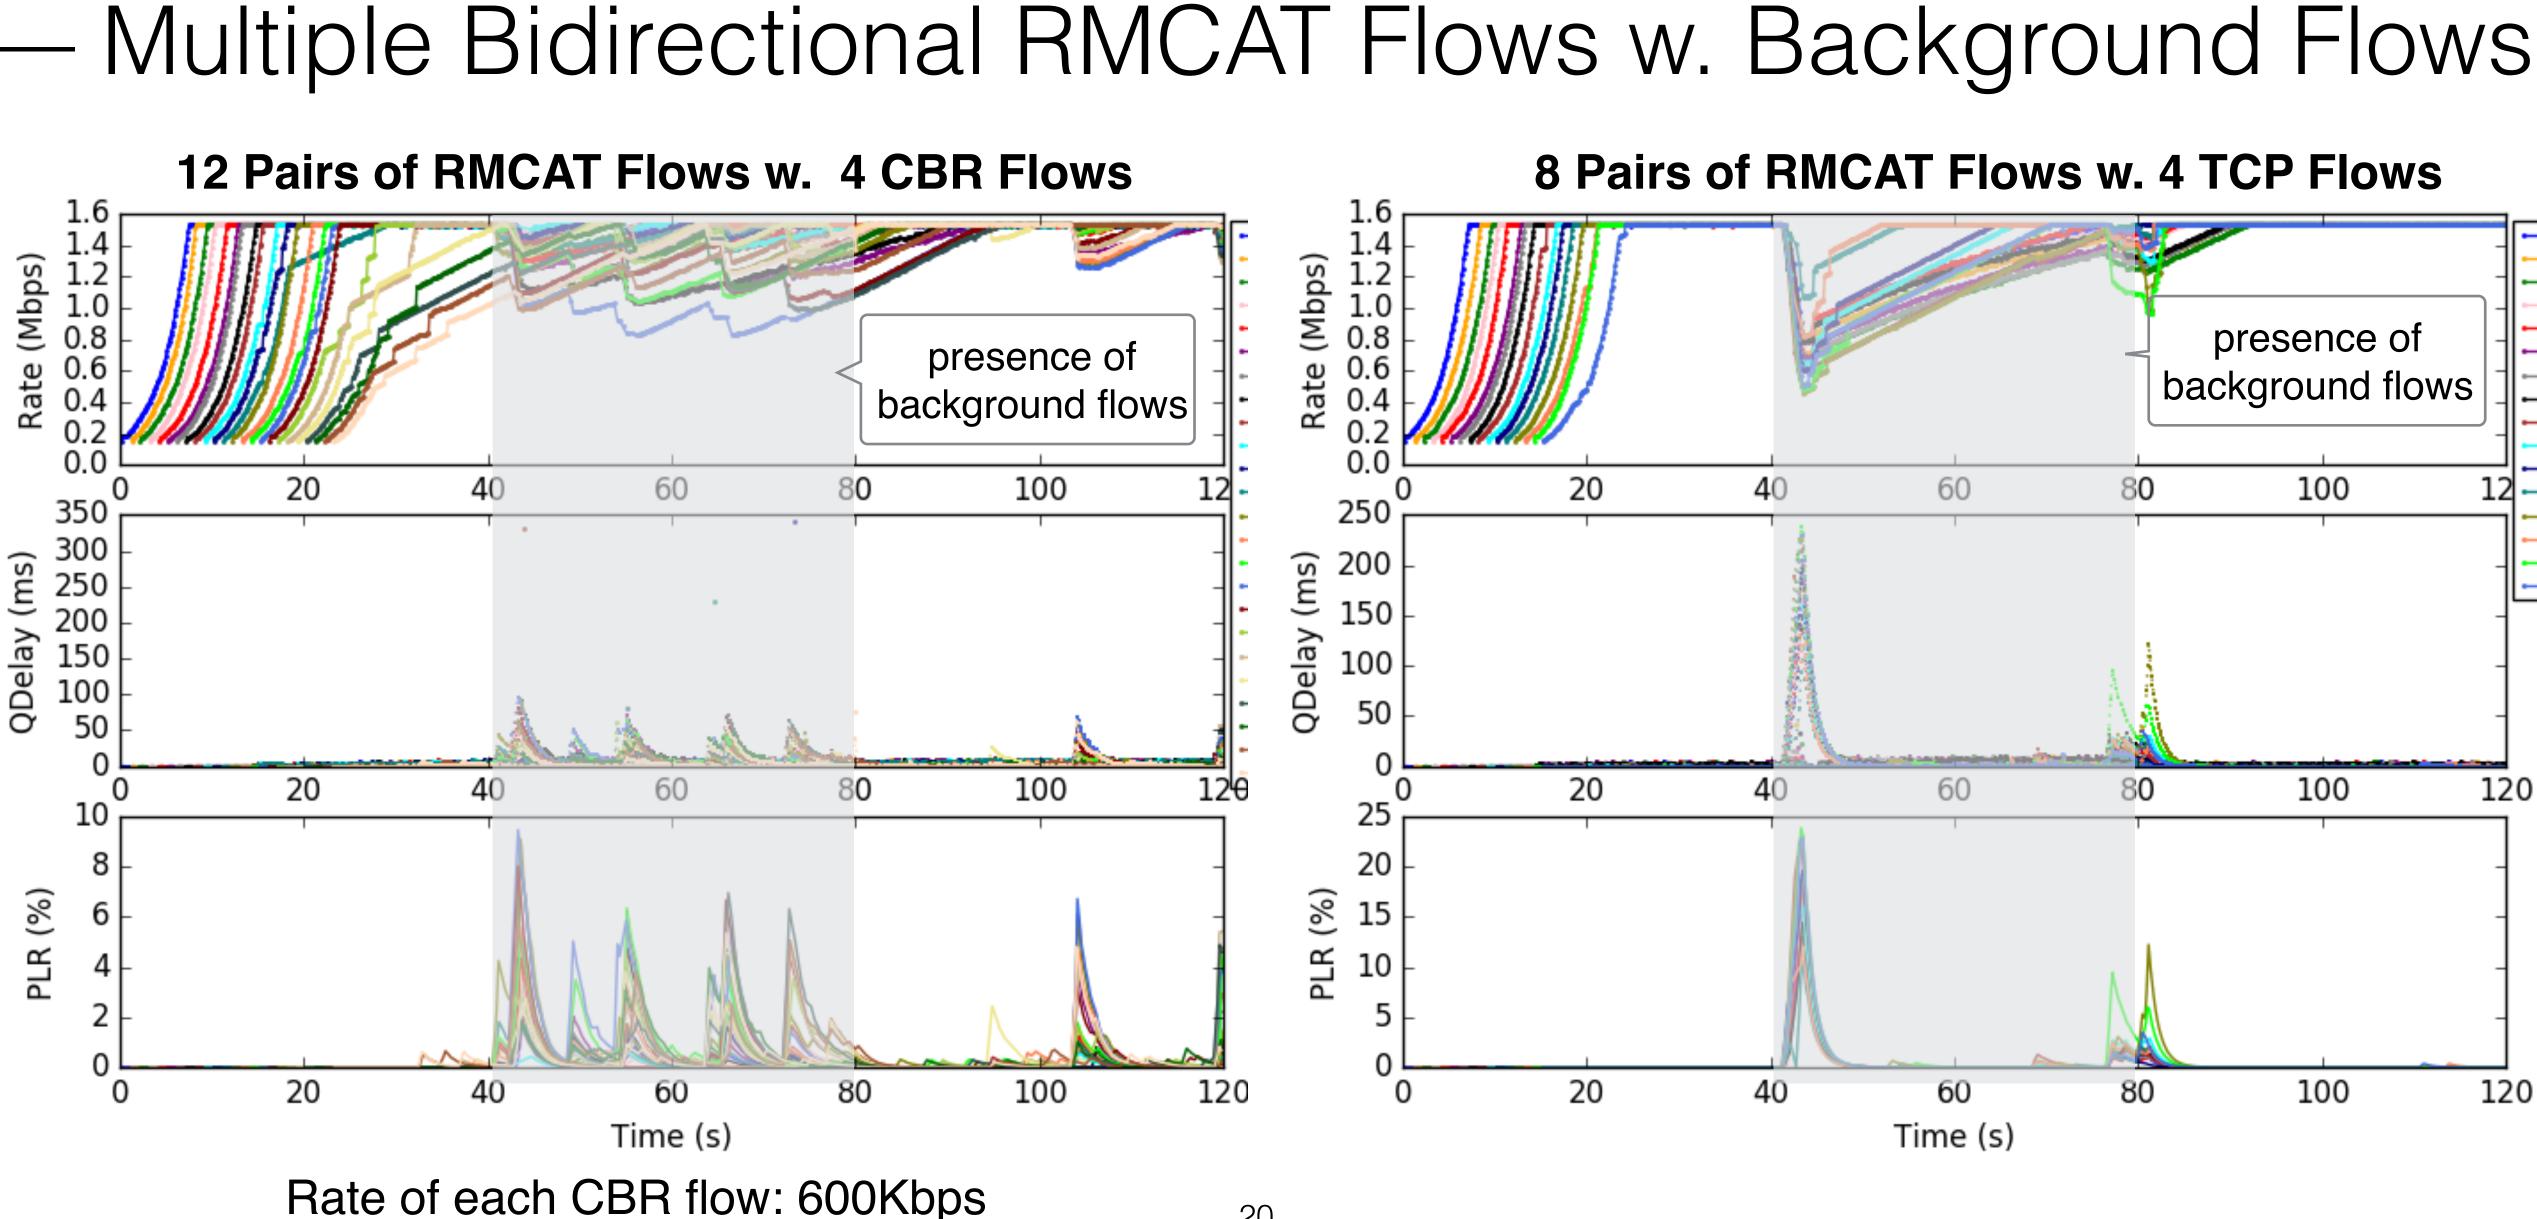

N_U=24 Uplink RMCAT Flows

4.2: Bottleneck in Wi-Fi Network — Multiple Bidirectional RMCAT Flows

4.2: Bottleneck in Wi-Fi Network

20

Summary of Known Issues

- Occasionally the algorithm may get stuck in loss-based mode
- available bandwidth
- take a long time (~60 seconds) to converge to equilibrium rate

• When working with trace-based traffic source, may under-utilize the

• In the presence of a fully utilized bottleneck, incoming new flows may
