

# JMAP extensions for S/ MIME signature verification

draft-ietf-jmap-smime-01

Alexey Melnikov <[alexey.melnikov@isode.com](mailto:alexey.melnikov@isode.com)>

# Changes in -01

- Added “smimeErrors” property
  - Human readable explanation of problems encountered while verifying the message signature/associated certificate
- Clarified that “smimeStatus” value can change over time (e.g. if the certificate expires)
- Added some text about how long the above 2 properties can be cached for.

# Open issues

- Should the date/time of last verification be returned as another property?

# What to do next?

- Other than the open question this is ready for WGLC
