

Registry Maintenance Notifications for the Extensible Provisioning Protocol

IETF REGEXT Internet-Draft

History

- Raised at ICANN Contracted Party House (CPH) TechOps group.
- Idea originated back to mid 2017.
- Pain point for registrars is that many domain name registry conduct maintenances and there is no standard to communicate those.
- First Internet-Draft was released October 2017 and since then continuously developed.
- Asked for adoption in March 2018.
- Adopted in March 2020.

Working Team

- Authors
