

Changes-to-the-RFC-Series-and-RSE-01

Nevil Brownlee, 26 June 2020

- Intended to provide some history of RSE operations, 2011-2018
- Changes to the RFC Series - the xml2rfc v3 effort
 - Two years and 3 BOFs, documented in RFC 6949
 - Developed by a Design Team, specified in RFCs 7990-7998
- Changes to the series can take a long time
 - Must not affect RPC productivity
 - May need new iterations from time to time
- RSE influence in such projects *must* continue over *years!*

- Support for the RSE
 - I proposed an "RFC Series Editorial Board"
 - RSEB should be separated from the IAB, and have strong representation from the Series Input Streams
 - This proposal has been superceded by our three more-recent drafts
- Development / Upades to the RFC Style Guide
 - Most input is from RFC Editors and RFC Authors
 - Editorial decisions are needed quickly
 - *Heather* did this; *John Levine* is now doing it (pretty well)
