

# glue-no-optional

dnsop interim, Sep 14th 2021

# Issue 1: “Orphan Glue”

Resolution: remove this section entirely.

# Issue 2: Requirements Around Sibling Glue

- “A name server \_\_\_\_\_ include all sibling glue or set TC=1”
- Reasons for MUST
  - Required for sibling glue loops
  - Robustness argument: always provide the most complete set of nameserver addresses as possible - you never know which subset is actually working
  -
- Reasons for SHOULD
  - Sibling glue not technically required for resolution (except for loop configurations)
  - The sentiment of WG members that spoke up

## Issue 3: Mention / Accommodate Sibling Glue Loops

- Should the document include an example of a sibling glue loop?
- Does the WG feel that configurations with sibling glue loops should be “supported” and reasonably expected to work?
