Extension Points

Syntactic Form

functor(argument...):

length(@.isbn)

current_year()

compare_normalized(@.firstname, 'Jörg')

Locations

Can appear in place of:

- boolean-expr (probably paren-expr)
- comparable
- singular-path
- string-literal
- ...?

Arguments

- boolean-expr
- comparable
- singular-path
- string-literal
- ...

Next

- Look at syntactical issues
- Are there semantics that differ between kinds of arguments/locations?
