Changes 15->16

• Fixed Jack’s suggested comments

• Clarified integrity digest is over URI contents for ‘icn’

• Adopted simplified procedures for doing JSON Pointer digest and moved to right place in document

• Fixed some of the digest example values
Added a new “icn” key/value to the “rcd” claim, the intent of this is to correspond to the Call-Info purpose of “icon” and provide a default mechanism for adding an image icon for calls. There was a lot of discussion about use of jCard if the only use was for including an image, and i think this hopefully is well received change by all.

Constraints paragraph -> plan to revert in a 17 if agreed as mentioned on list
Onward

• Any other issues to discuss?
