

Draft MADINAS BCP (one of them)

Jerome Henry

May 2023

v 01

Draft Update

<https://www.ietf.org/archive/id/draft-henry-madinas-bcp-network-rcm-00.html>

Goal is to:

1. Define best practices for network services in an RCM context
 1. Not intended to invent new standards
 2. Point to best practices to service RCM (while not defeating RCM)

Draft Update

<https://www.ietf.org/archive/id/draft-henry-madinas-bcp-network-rcm-00.html>

Two parts:

1. Define environments and practices (for RCM)
 - Home, managed residential, enterprise campus (BUYOD), MDM, hospitality, public Wi-Fi
2. Insert what was section 7 in the use case document
 1. How 802.1X/WPA3 helps in enterprise BYOD
 2. How OpenRoaming helps in public WiFi

Draft Update

Proposed steps :

- Get to unification with Michael's BCP
- Modify the use case doc in light of the BCP (and adopt the use case doc)
