Network Measurement Methods for

Locating and Examining Censorship Devices

Applied Networking Research Prize | IETF 118 Prague

The Washington Post
Democracy Dies in Darkness

MIDDLE EAST

Sanctions and censorship are making the Internet in Iran less accessible, analysts say

Large-scale censorship and surveillance events

Enabled by

Country-wide Filtering and Regulatory Compliance

Netsweeper

- Citizen Lab Identified an "**Alternative Lifestyles"** blocklist curated by Netsweeper was used by several countries such as UAE to block LGBTQ content.
- After advocacy based on Citizen Lab's findings, Netsweeper claims they have **removed the option** to block based on this category.

VICE

Canadian Internet Filtering Company Says It's Stopped 'Alternative Lifestyles' Censorship

The UAE was found to be blocking LGBTQ content using a pre-set category in Netsweeper's software. Amid pressure from rights groups, the company says it's disabled that category.

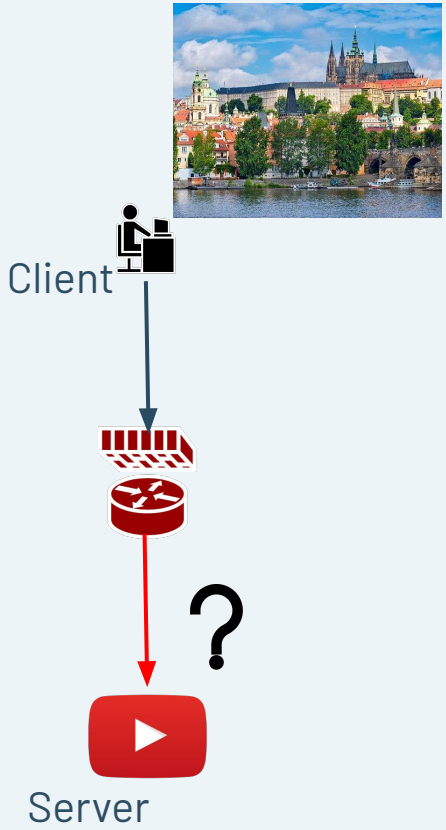
What and When?

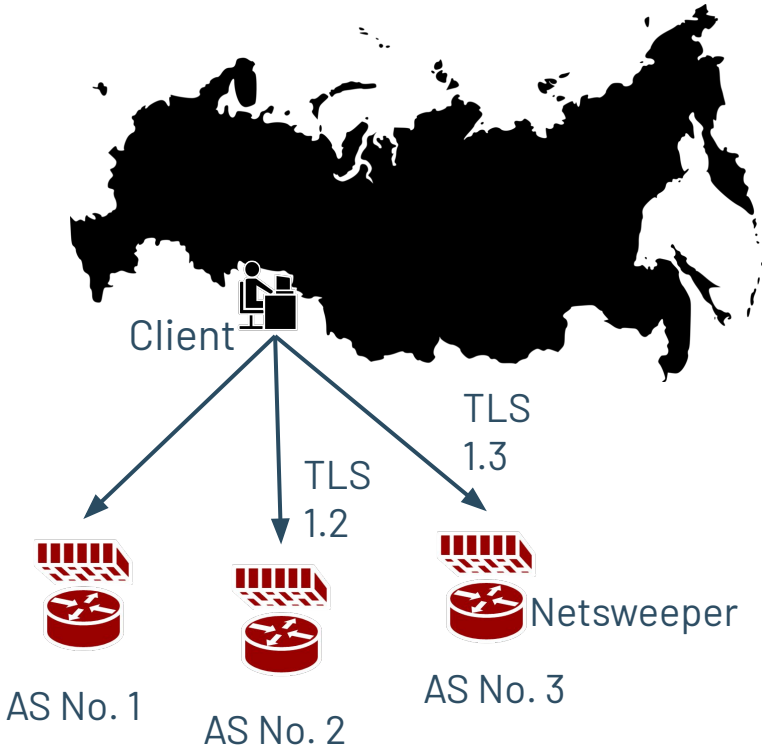
- Censorship Measurement Platforms

Censored Planet

OONI

IODA
INTERNET OUTAGE DETECTION AND ANALYSIS





Who, Where and How?

- Specific censorship systems
  - Great Firewall of China
  - Iran's national firewall
  - Russia's TSPU system

Challenges and Gaps

1. Opaque nature of censorship
2. Lack of transparency
3. Variety of devices and censorship techniques
4. Reliance on specific behaviors
5. Large manual effort does not scale

Need: **General-purpose, robust methods**

To study censorship devices

We built robust, reusable solutions to:

1

Locate censorship devices

Censorship Traceroute

2

Identify device vendors

Banner grabs and Clustering

3

Reverse-engineer censorship triggers

Censorship Fuzzer

We built robust, reusable solutions to:

1

Locate censorship devices

Censorship Traceroute

2

Identify device vendors

Banner grabs and Clustering

3

Reverse-engineer censorship triggers

Censorship Fuzzer

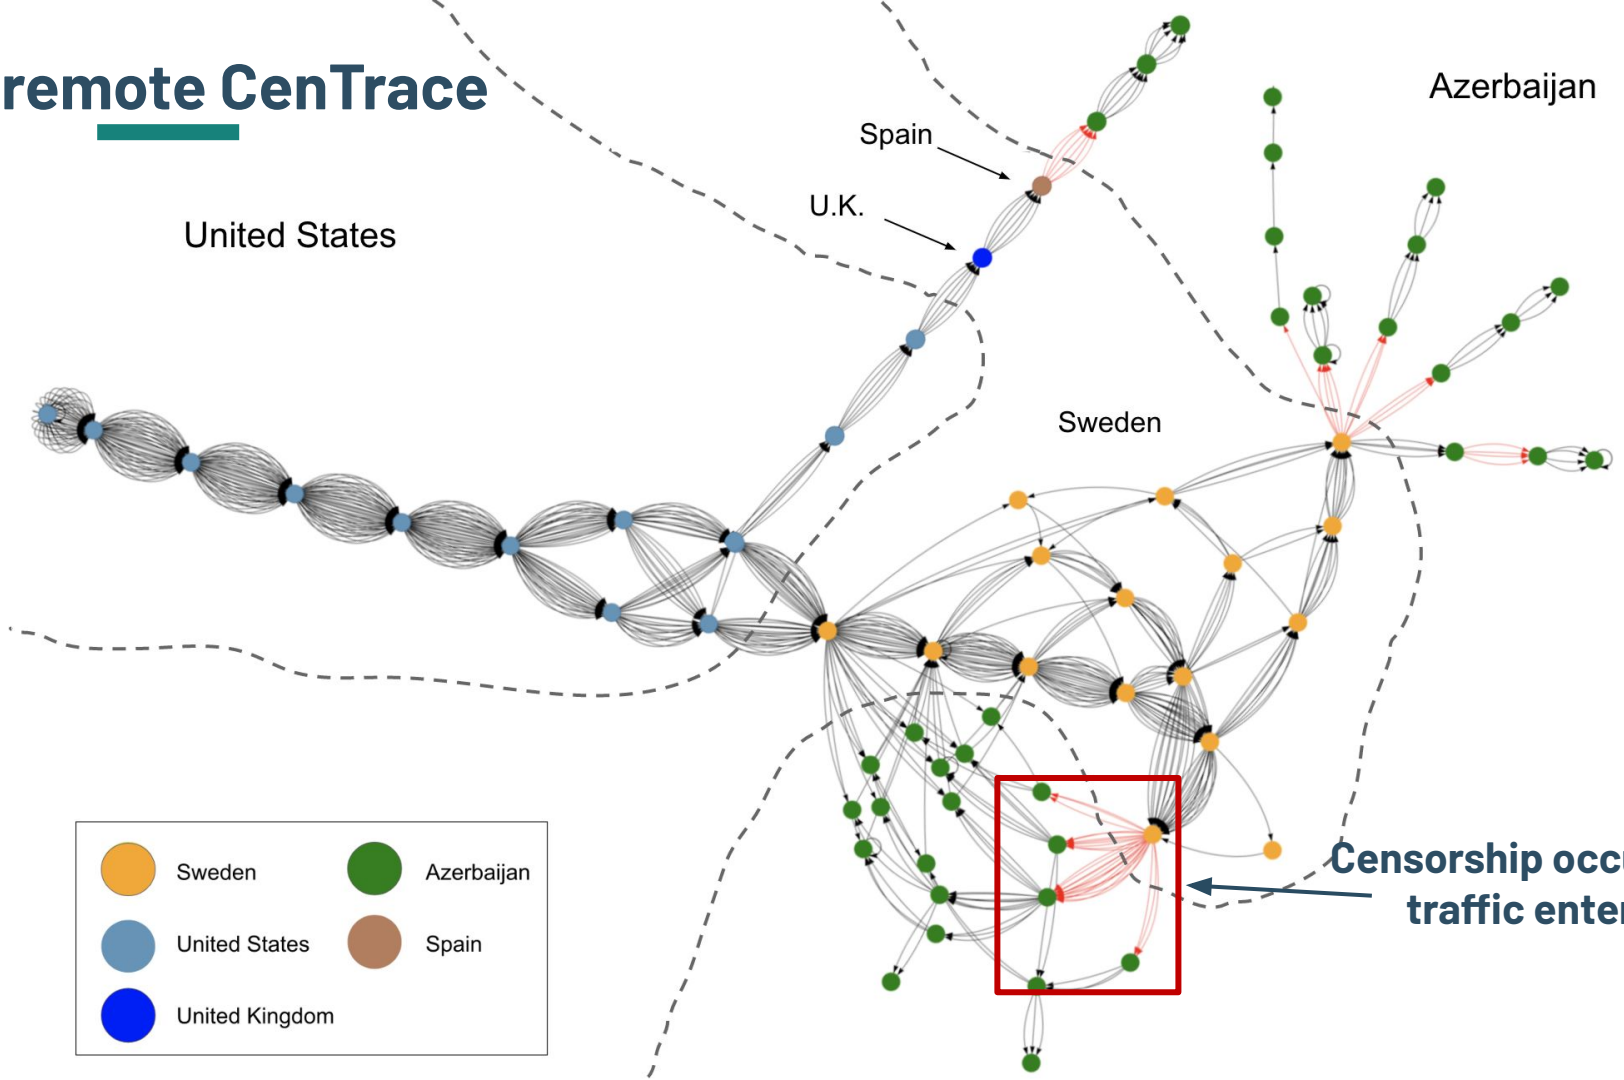
CenTrace

In-country measurements (Country -> Out)

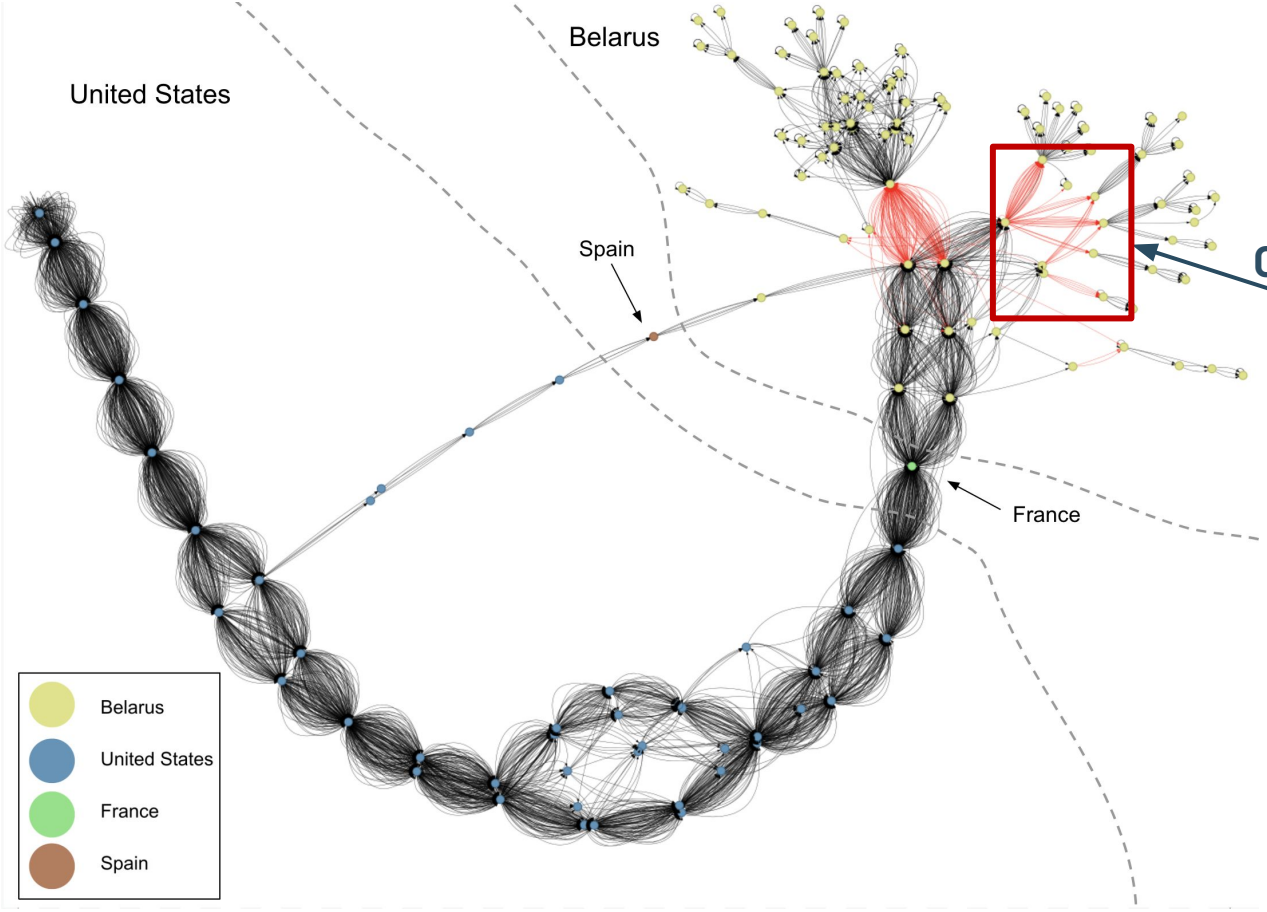
Remote measurements (Out -> Country)

- Conduct in-country and remote measurements in Azerbaijan (AZ), Belarus (BY), Kazakhstan (KZ), Russia (RU)
- HTTP and TLS traceroutes

AZ remote CenTrace

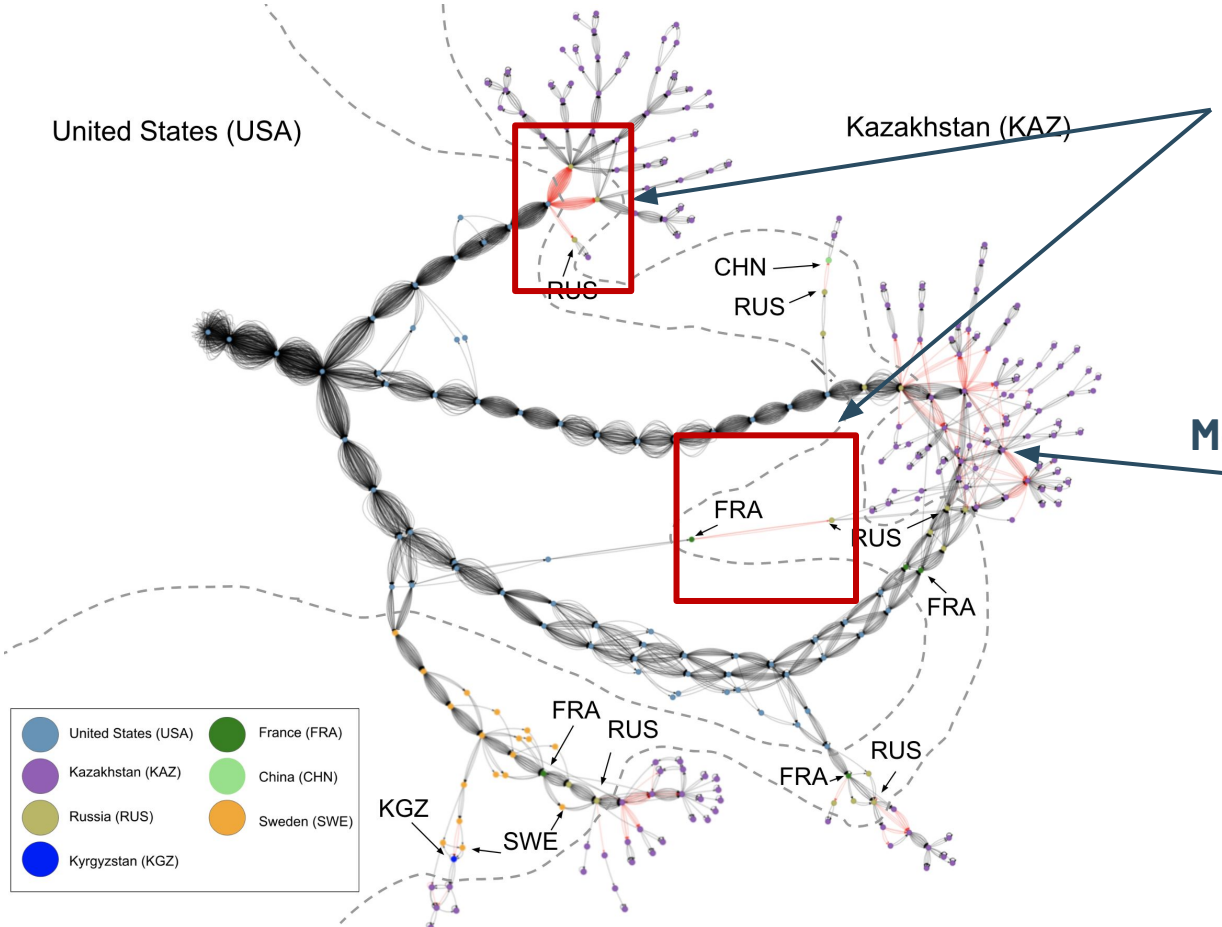


BY remote CenTrace



Censorship occurs closer to the user

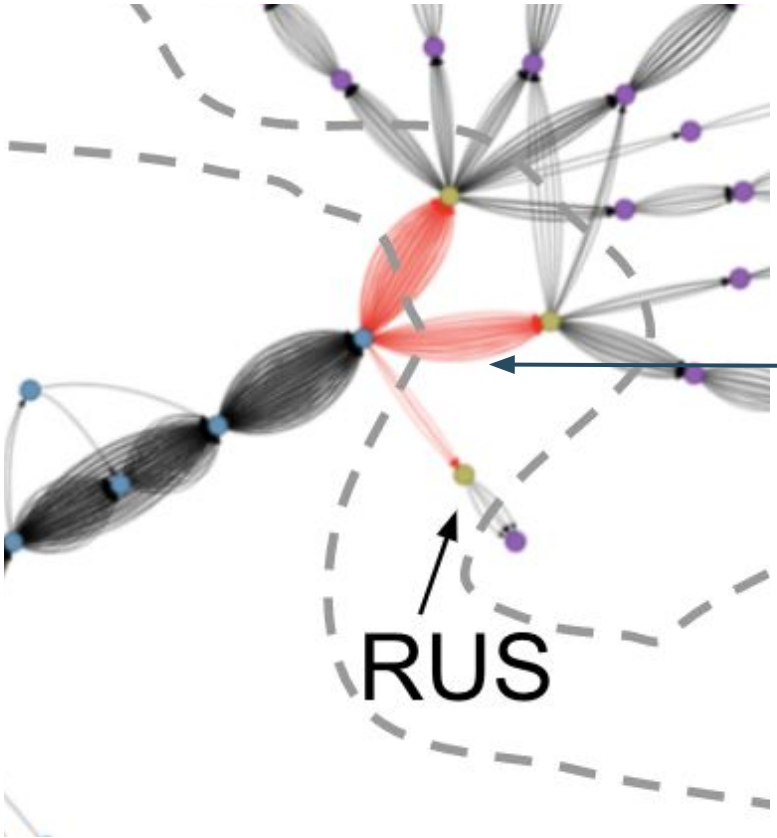
KZ remote CenTrace



What are these cases?

Most censorship occurs inside KZ

KZ remote CenTrace



Censorship occurs in Russian AS, even before entering KZ

CenTrace Observations

- Significant portion of remote measurements are **blocked at the endpoint,** indicate local policies
- Some devices exhibit specialized behavior such as **copying TTL values** from original packet.
- Packet drops in Azerbaijan and Kazakhstan, Resets in Belarus and Russia

We built robust, reusable solutions to:

1

Locate censorship devices

Censorship Traceroute

2

Identify device vendors

Banner grabs and Clustering

3

Reverse-engineer censorship triggers

Censorship Fuzzer

We built robust, reusable solutions to:

1

Locate censorship devices

Censorship Traceroute

2

Identify device vendors

Banner grabs and Clustering

3

Reverse-engineer censorship triggers

Censorship Fuzzer

Commercial Network Devices

Device	AZ	KZ	RU
Fortinet	❌	❌	❌
Cisco	❌	❌	❌
Kerio Control		❌	
Palo Alto	❌		❌
DDoSGuard			❌
Mikrotik		❌	
Kaspersky			❌

Commercial Network Devices

Device
Fortinet
Cisco
Kerio Control
Palo Alto
DDoSGuard
Mikrotik
Kaspersky

Do these devices behave the same way?

We built robust, reusable solutions to:

1

Locate censorship devices

Censorship Traceroute

2

Identify device vendors

Banner grabs and Clustering

3

Reverse-engineer censorship triggers

Censorship Fuzzer

We built robust, reusable solutions to:

1

Locate censorship devices

Censorship Traceroute

2

Identify device vendors

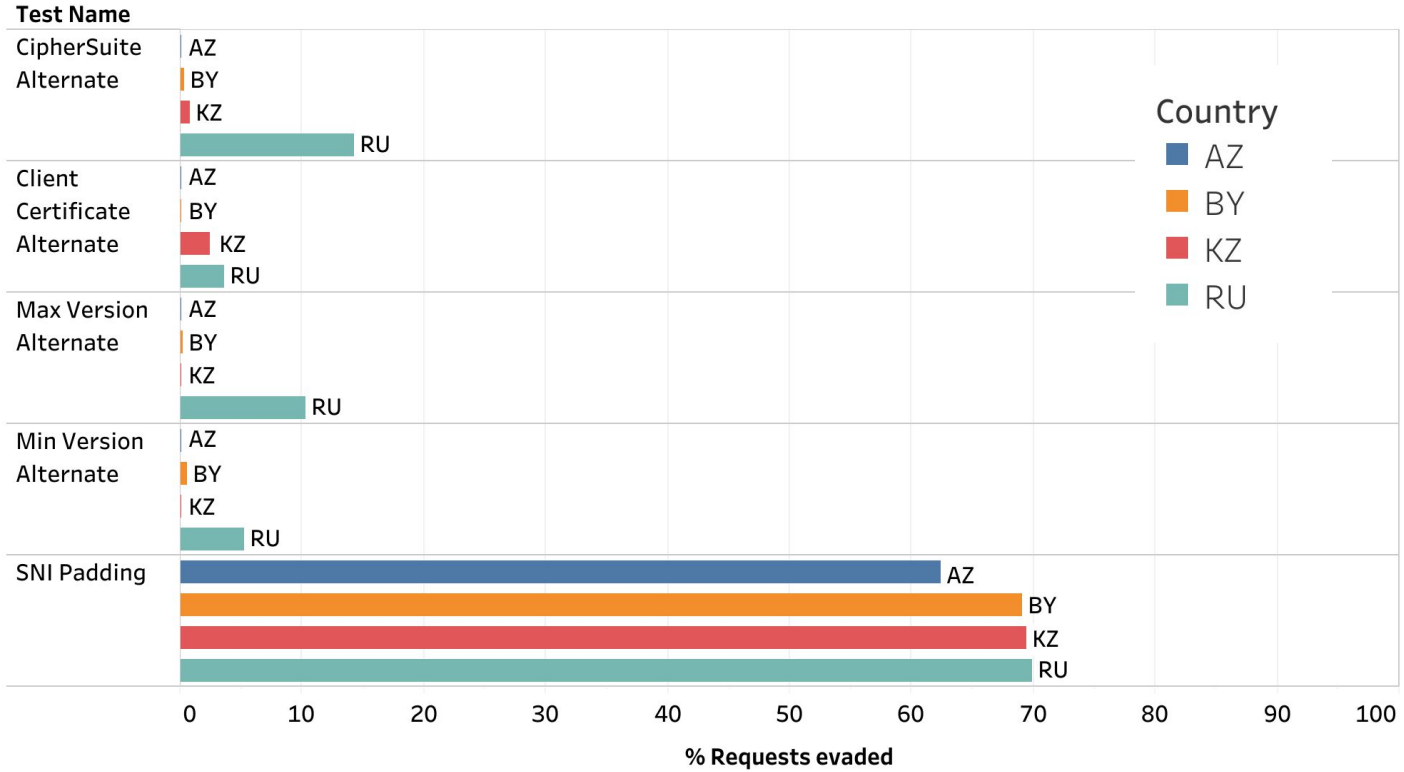
Banner grabs and Clustering

3

Reverse-engineer censorship triggers

Censorship Fuzzer

CenFuzz TLS: Evasion Success Rates



We built robust, reusable solutions to:

1

Locate censorship devices

Censorship Traceroute

2

Identify device vendors

Banner grabs and Clustering

3

Reverse-engineer censorship triggers

Censorship Fuzzer

We built robust, reusable solutions to:

Study similarities between devices

1

Locate censorship devices

Censorship Traceroute

2

Identify device vendors

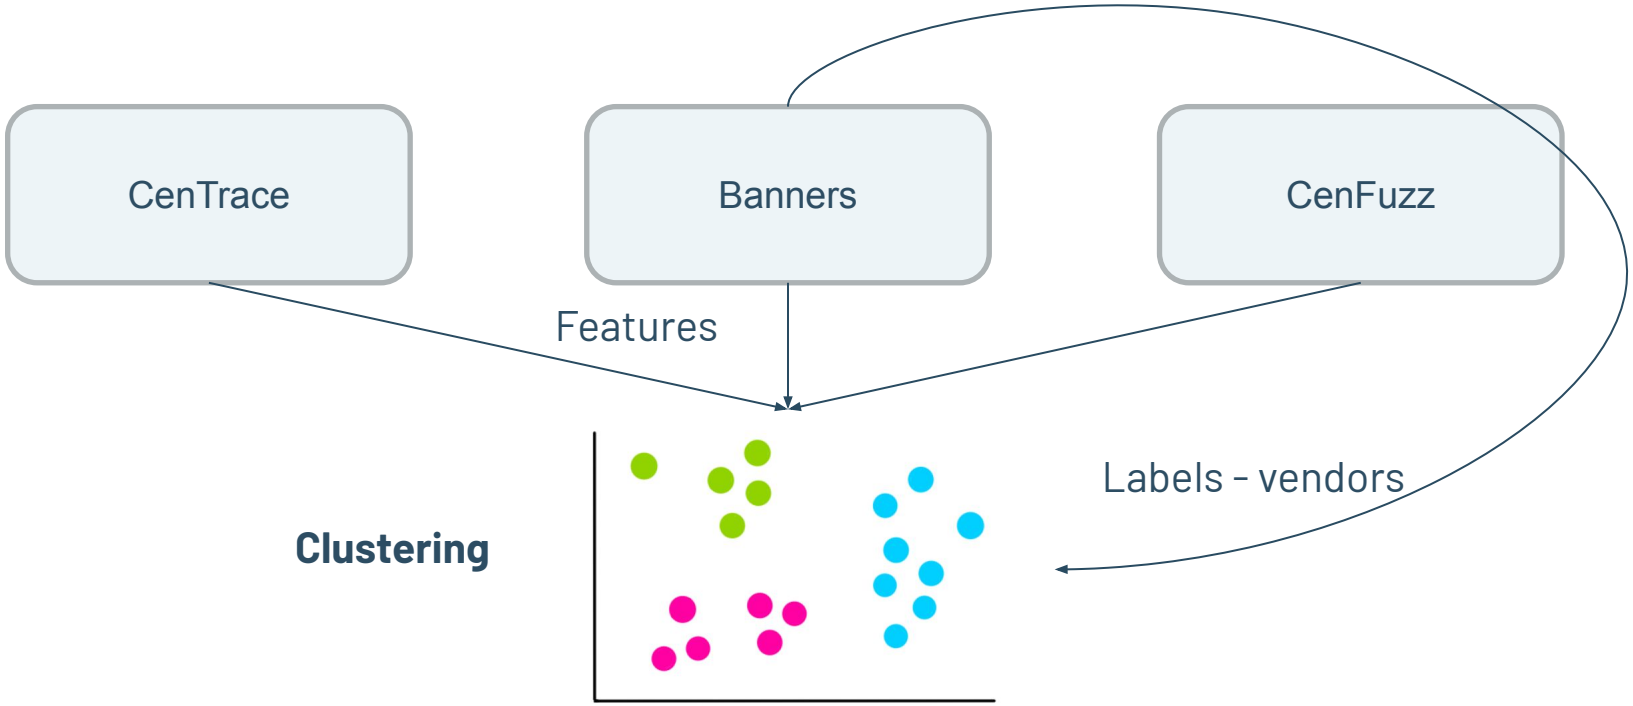
Banner grabs and Clustering

3

Reverse-engineer censorship triggers

Censorship Fuzzer

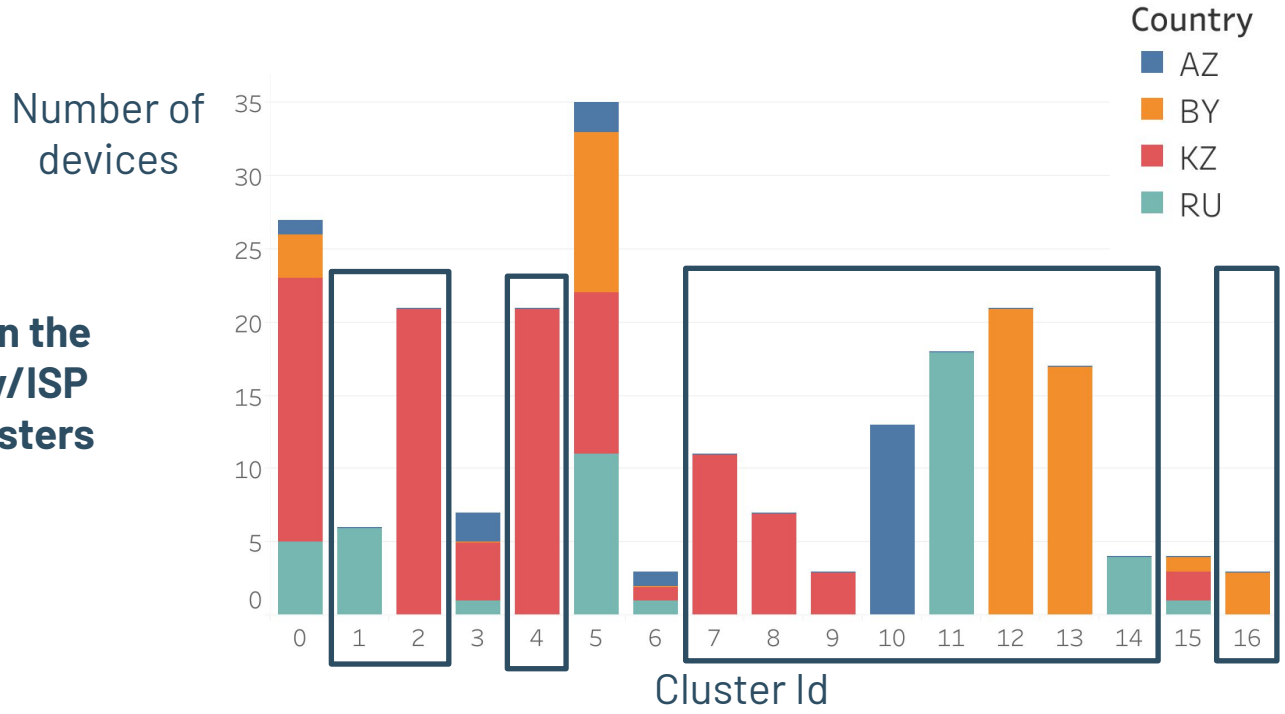
Clustering Devices



Clustering Devices

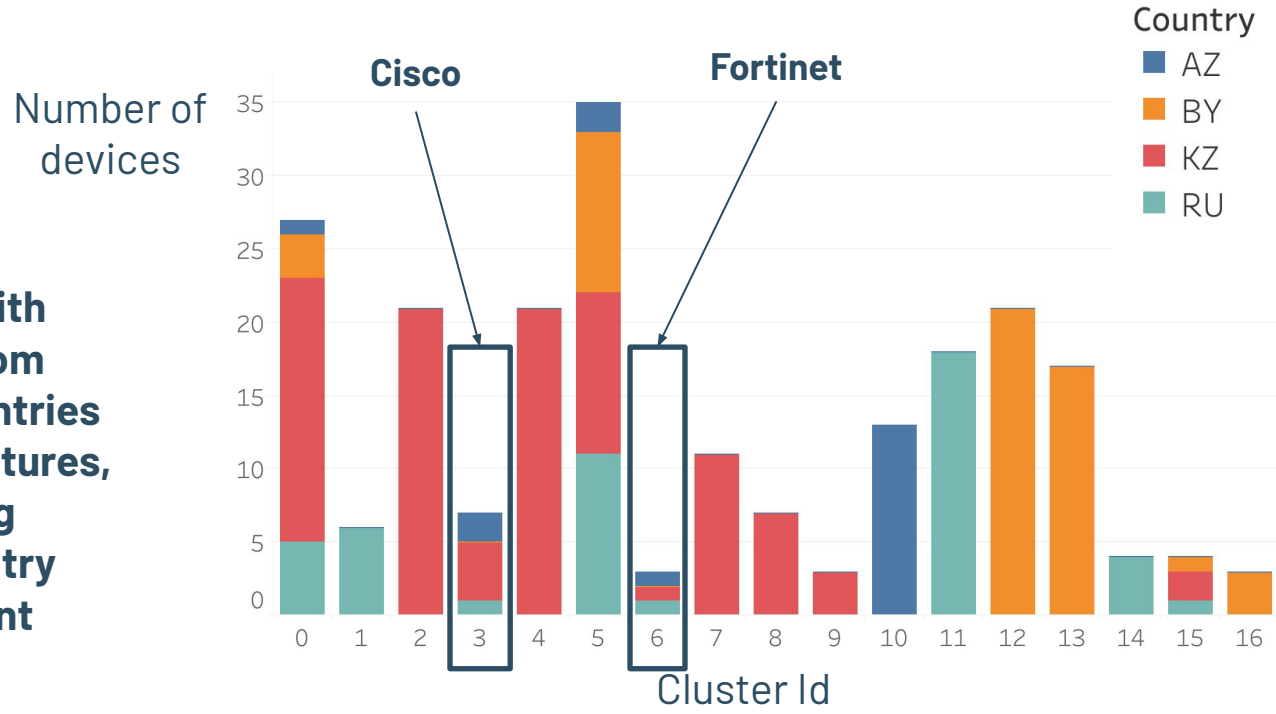
Clustering Devices

Devices within the same country/ISP form tight clusters



Clustering Devices

Clusters with devices from different countries have same features, indicating cross-country deployment



Our code and data are fully open-source

Highlighting policy gaps
Assisting censorship research

What's Next?

- Integrate CenTrace, CenFuzz into Censored Planet, OONI
- Improve ground truth
- **Enforce standardized error messages and blocking mechanisms**
- **Encourage publication and auditing of blocklists**
- **Invest in privacy-preserving technologies like Zero Knowledge middleboxes**

Key Takeaways

- Location of censorship is important: **frequently occurs in upstream ISPs or even in other countries**
- Devices can be deployed with different properties: **in-path, on-path, packet drops, copy TTL values**
- **Banners** on popular protocols and blockpages are useful for identification
- The censorship triggers and other features are **device- or deployment-specific** and can be used to fingerprint them

Key Takeaways

- Location of censorship is important – **frequently occurs in upstream ISPs or even in other countries**
- Devices can be deployed with different properties – **in-path, on-path, packet drops, copy TTL values**
- **Banners** on popular protocols are useful for identification
- The censorship triggers and other features are **device- or deployment-specific** and can be used to fingerprint or identify them
